

110TH CONGRESS
2D SESSION

H. RES. 1228

Ensuring access to affordable and quality health care without exacerbating the Federal budget or contributing to market inflation while providing greater choices for consumers.

IN THE HOUSE OF REPRESENTATIVES

MAY 22, 2008

Mrs. MCMORRIS RODGERS submitted the following resolution; which was referred to the Committee on Energy and Commerce, and in addition to the Committees on Ways and Means and the Judiciary, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

RESOLUTION

Ensuring access to affordable and quality health care without exacerbating the Federal budget or contributing to market inflation while providing greater choices for consumers.

Whereas the United States health care system is the most advanced in the world, capable of providing miracle cures and the best possible care;

Whereas there are real challenges facing the current health care system, and Congress continues to give top priority to increasing access to affordable and quality health care and health insurance coverage;

Whereas the United States spends substantially more on health care than other developed countries, with total health care spending reaching \$2,200,000,000,000 a year or close to \$7,000 for each American;

Whereas health care spending consumes about 17 percent of the gross domestic product;

Whereas there are approximately 47 million uninsured in the United States;

Whereas 18 to 35 year olds are the most underinsured section of the population;

Whereas more than half of the uninsured work for a small business;

Whereas every American should have health insurance coverage and the freedom to choose and control it;

Whereas Americans value choice and control over their health care decisions and greater government involvement in their health sector would lead to higher costs, fewer medical discoveries and treatments, delays in access to care, and excessive and expensive increase in paperwork and bureaucracy;

Whereas Americans can improve quality and access in a way that also reduces costs by bringing more competition and choice into their health sector and by giving people tools and incentives to become partners in managing their health spending and their health care; and

Whereas Americans must begin to refocus their health sector on encouraging wellness and prevention because health problems caught early are far less expensive to care for and the treatment is far more effective: Now, therefore, be it

1 *Resolved*, That it is the sense of the House of Rep-
2 resentatives that in order to ensure access to affordable
3 and quality health care without exacerbating the Federal
4 budget or contributing to market inflation while providing
5 greater choices for consumers, the following principles for
6 a market-based approach should be included in any health
7 care bill considered by the 110th Congress:

8 (1) The ability to receive point-of-service health
9 care in preventative, emergency, and rehabilitative
10 settings in rural and urban areas. This must also
11 advance critical health care training programs to re-
12 tain health care professionals and find a meaningful,
13 long-term solution for the sustainable growth rate
14 formula that will accurately reimburse physicians for
15 the care they provide to Medicare beneficiaries.

16 (2) Refundable tax credits for the purchase of
17 health insurance by low-income recipients combined
18 with laws that allow for association health plans and
19 small business health plans. The cost of health care
20 is within the reach of families and individuals while
21 reducing costs without hurting the patient.

22 (3) Medical liability reform to bring some level
23 of sanity to the excessive punitive damages that are
24 driving up health care costs to the benefit of the

1 trial attorneys that are driving malpractice costs to
2 record levels, further raising health care costs.

3 (4) Safe and effective health service with meas-
4 urable results through health information tech-
5 nology.

6 (5) Build new incentives into health plans to
7 encourage wellness, prevention, and to provide incen-
8 tives for people to make smart choices involving
9 their health, health care, and health insurance cov-
10 erage.

11 (6) Give consumers the ability to choose the
12 best health care plan and options to meet their indi-
13 vidual and family needs through portable health in-
14 surance and Health Savings Accounts.
