

citizens, parents—are bound to do whatever we can to keep them safe and healthy. Simple safety measures—such as using child-resistant packaging correctly, locking cupboards, keeping prescriptions and cleaning supplies out of the reach of a child's hands—all can protect our most precious resource from the dangers of poison and other hazardous substances.

The U.S. Consumer Product Safety Commission (CPSC) has made great progress in safeguarding our young people by mandating child-resistant packaging for medicine and dangerous chemicals. And the invaluable work of the Nation's poison control centers has saved countless lives, both young and old. These public health efforts have reduced childhood poisoning deaths from 450 in 1961 to 62 in 1991.

However, according to the American Association of Poison Control Centers, nearly 1 million children each year are exposed to potentially poisonous medicines and household chemicals. Every year we lose children to poisoning—and almost all of these poisonings are preventable. This week—and every week—we must rededicate ourselves to informing everyone of the importance of prevention and to educating all caregivers about ways to prevent childhood poisonings.

To encourage the American people to learn more about the dangers of accidental poisonings and to take more preventive measures, the Congress, by Public Law 87-319 (75 Stat. 681), has authorized and requested the President to issue a proclamation designating the third week of March of each year as "National Poison Prevention Week."

**Now, Therefore, I, William J. Clinton,** President of the United States of America, do hereby proclaim the week beginning March 19, 1995, as National Poison Prevention Week. I call upon all Americans to observe this week by participating in appropriate ceremonies and activities.

**In Witness Whereof,** I have hereunto set my hand this fifteenth day of February, in the year of our Lord nineteen hundred and ninety-five, and of the Independence of the United States of America the two hundred and nineteenth.

**William J. Clinton**

[Filed with the Office of the Federal Register, 11:17 a.m., February 16, 1995]

NOTE: This proclamation was published in the *Federal Register* on February 17.

## **Statement on Petroleum Imports and Energy Security**

*February 16, 1995*

I am today concurring with the Department of Commerce's finding that the Nation's growing reliance on imports of crude oil and refined petroleum products threaten the Nation's security because they increase U.S. vulnerability to oil supply interruptions. I also concur with the Department's recommendation that the administration continue its present efforts to improve U.S. energy security, rather than to adopt a specific import adjustment mechanism.

This action responds to a petition under Section 232 of the Trade Expansion Act of 1962, which was filed by the Independent Petroleum Association of America and others on March 11, 1994. The act gives the President the authority to adjust imports if they are determined to pose a threat to national security. The petitioners sought such action, claiming that U.S. dependence on oil imports had grown since the Commerce Department last studied the issue in response to a similar, 1988 petition.

In conducting its study, the Department led an interagency working group that included the Departments of Energy, Interior, Defense, Labor, State, and Treasury, the Office of Management and Budget, the Council of Economic Advisers, and the U.S. Trade Representative. The Commerce Department also held public hearings and invited public comment. Following White House receipt of the Commerce Department's report, the National Economic Council coordinated additional interagency review.

As in the case of its earlier study, the Commerce Department found that the potential costs to the national security of an oil import adjustment, such as an import tariff, outweigh the potential benefits. Instead, the Department recommended that the administration continue its current policies, which are aimed at increasing the Nation's energy secu-

rity through a series of energy supply enhancement and conservation and efficiency measures designed to limit the Nation's dependence on imports. Those measures include:

- Increased investment in energy efficiency.
- Increased investment in alternative fuels.
- Increased Government investment in technology, to lower costs and improve production of gas and oil and other energy sources.
- Expanded utilization of natural gas.
- Increased Government investment in renewable energy sources.
- Increased Government regulatory efficiency.
- Increased emphasis on free trade and U.S. exports.
- Maintenance of the Strategic Petroleum Reserve.
- Coordination of emergency cooperation measures.

Finally, led by the Department of Energy and the National Economic Council, the administration will continue its efforts to develop additional cost-effective policies to enhance domestic energy production and to revitalize the U.S. petroleum industry.

### **Message to the Congress on the Proliferation of Chemical and Biological Weapons**

*February 16, 1995*

*To the Congress of the United States:*

On November 16, 1990, in light of the dangers of the proliferation of chemical and biological weapons, President Bush issued Executive Order No. 12735, and declared a national emergency under the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*). Under section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), the national emergency terminates on the anniversary date of its declaration unless the President publishes in the *Federal Register* and transmits to the Congress a notice of its continuation.

On November 14, 1994, I issued Executive Order No. 12938, which revoked and super-

seded Executive Order No. 12735. As I described in the report transmitting Executive Order No. 12938, the new Executive order consolidates the functions of Executive Order No. 12735, which declared a national emergency with respect to the proliferation of chemical and biological weapons, and Executive Order No. 12930, which declared a national emergency with respect to nuclear, biological, and chemical weapons, and their means of delivery. The new Executive order continued in effect any rules, regulations, orders, licenses, or other forms of administrative action taken under the authority of Executive order No. 12735. This is the final report with respect to Executive Order No. 12735.

This report is made pursuant to section 204 of the International Emergency Economic Powers Act and section 401(c) of the National Emergencies Act regarding activities taken and money spent pursuant to the emergency declaration. Additional information on chemical and biological weapons proliferation is contained in the annual report to the Congress provided pursuant to the Chemical and Biological Weapons Control and Warfare Elimination Act of 1991.

The three export control regulations issued under the Enhanced Proliferation Control Initiative are fully in force and continue to be used to control the export of items with potential use in chemical or biological weapons (CBW) or unmanned delivery systems for weapons of mass destruction.

During the final 6 months of Executive Order No. 12735, the United States continued to address actively in its international diplomatic efforts the problem of the proliferation and use of CBW.

At the termination of Executive Order No. 12735, 158 nations had signed the Chemical Weapons Convention (CWC) and 16 had ratified it. On November 23, 1993, I submitted the CWC to the Senate for its advice and consent to ratification. The United States continues to press for prompt ratification of the Convention to enable its entry into force as soon as possible. We also continue to urge those countries that have not signed the Convention to do so. The United States has remained actively engaged in the work of the CWC Preparatory Commission headquartered in The Hague, to elaborate the tech-
