

but I'd love to—that's one of the reasons I enjoyed re-reading the book.

Let me also say one other thing to close—since our Nobel laureate talked about his faith about how the world began—the First Lady started tonight by talking about the marvels of technology which enable this astonishing man to communicate with us. And it is true that he is here, and we did this because of the marvels of technology. It is also true, in my mind, that he is a genuine living miracle because of the power of the heart and the spirit. And we can only hope that all the advances that he has foreseen for us tonight in human knowledge will serve to amplify the heart and the spirit that we have humbly witnessed this evening.

Thank you, and God bless you all.

NOTE: The President spoke at 8:17 p.m. in the East Room at the White House. In his remarks, he referred to Elaine Hawking, wife of Stephen W. Hawking, Lucasian professor of mathematics at Cambridge University, who gave the second lecture in the Millennium series; Ellen Lovell, Director, White House Millennium Council; and William D. Phillips, 1997 Nobel laureate in physics. The President also referred to the canceled superconducting super collider project. Professor Hawking, who suffers from amyotrophic lateral sclerosis, also known as Lou Gehrig's disease, spoke with the aid of a computerized voice synthesizer. This item was not received in time for publication in the appropriate issue.

### **The President's Radio Address**

*March 7, 1998*

Good morning. Since I took office I've done everything in my power to protect our children from harm. We've worked to make their streets and their schools safer, to give them something positive to do after school and before their parents get home. We've worked to teach our children that drugs are dangerous, illegal, and wrong. This week we took a major step to protect our children, indeed all Americans, from the dangers of drunk driving by proposing bipartisan legislation to lower the legal limit to .08 in every State.

Today I want to talk to you about the historic opportunity we now have to protect our Nation's children from an even more deadly

threat: smoking. Smoking kills more people every day than AIDS, alcohol, car accidents, murders, suicides, drugs, and fires combined. Nearly 90 percent of those smokers lit their first cigarette before they turned 18.

Today, the epidemic of teen smoking is raging throughout our Nation as, one by one, our children are lured by multimillion dollar marketing schemes designed to do exactly that. Consider this: 3,000 children start to smoke every day illegally, and 1,000 of them will die sooner because of it. This is a national tragedy that every American should be honor-bound to help prevent.

For more than 5 years we've worked to stop our children from smoking before they start, launching a nationwide campaign with the FDA to educate them about the dangers of smoking, to reduce their access to tobacco products, and to severely restrict tobacco companies from advertising to young people. But even this is not enough to fully protect our children.

To put an end to the epidemic, Congress must act. Last fall I called on Congress to put aside politics and pass comprehensive bipartisan legislation to reduce teen smoking by raising the price of cigarettes by up to a dollar and a half a pack over the next 10 years, imposing strong penalties if the tobacco industry keeps selling cigarettes to our children, affirming the FDA's full authority to regulate tobacco, to prevent children's access to tobacco products, and to restrict tobacco ads aimed at young people, so that our children can't fall prey to the deadly threat of tobacco. Now, we learned last month that if we do this, we'll cut teen smoking by almost half over the next 5 years. That means if we act now, we have it in our power to stop 3 million children from smoking and to save a million lives as a result.

Today there are as few as 70 working days left before this Congress adjourns. On every one of those days, 1,000 adults will die from smoking. On every one of those days, 3,000 children will light their first cigarettes. On every one of those days, this Congress has the opportunity to stop it.

Will this Congress be remembered for putting politics aside and protecting our children from tobacco or for letting the public health opportunity of a lifetime pass us by?

There will be no greater measure of your commitment to the health of our children or the future of our Nation.

Thanks for listening.

NOTE: The President spoke at 10:06 a.m. from the Oval Office at the White House.

### **Statement on the Death of James B. McDougal**

*March 8, 1998*

I am saddened to learn about Jim McDougal's death today. I have good memories of the years we worked together in Arkansas, and I extend my condolences to his family.

### **Remarks to the American Medical Association National Leadership Conference**

*March 9, 1998*

Thank you very much for that warm welcome. And thank you, Dr. Wootton. He was giving his talk, and I was listening, and I was thinking: I agree with all that; there's nothing left for me to say. If I knew a couple of funny stories, I could just tell them and leave and thank you for the opportunity. *[Laughter]*

Dr. Dickey, congratulations on being the president-elect. Dr. Reardon, thank you for serving on the Advisory Commission on Consumer Protection and Quality. Dr. Smoak, thank you for telling me there's nothing incompatible between a doctor named "Smoke" and a campaign against tobacco. *[Laughter]* Dr. Jensen, ladies and gentlemen.

I am honored to be here and to be working with the AMA on so many important fronts. We have, in the past, sometimes had honest differences on policy but have always agreed on our profound obligation to the health of our Nation's families. We're walking together in a step-by-step approach to health care reform, expanding the promise of new medical technologies, extending health care opportunities to the most vulnerable Americans.

Together we've helped Americans to keep their health coverage when they change jobs or someone in their families gets sick. And in last year's balanced budget agreement we

helped to make sure that up to 5 million uninsured children will get the medical coverage they deserve and the help they need, with the biggest increase in health coverage for children since 1965.

We have worked to increase medical research and to support greater efforts at preservation and care for conditions from breast cancer to diabetes. Last year, in our balanced budget plan, the diabetes component was said by the American Diabetes Association to be the most important advance in the treatment and care of diabetes since the discovery of insulin.

We found the right family doctor for America, Dr. David Satcher, our new Surgeon General. Last month your voices were strong and united in support of his nomination, and I thank you, and America's families thank you. The lesson of these endeavors is that when we work together, we can get things done.

This is a very great moment for America on the edge of a new century, a new millennium, and a completely new economy and new global society. We see dramatic changes in the way our people work and live and relate to each other and the rest of the world. Our economy is the strongest it's been in a generation. In 5 years, we have 15 million new jobs, the lowest unemployment rate in 24 years, the lowest inflation rate in 30 years, the highest homeownership rate in the history of the country. Our social problems are on the mend. Crime is at its lowest rate in 24 years. The welfare rolls are the lowest in 27 years. Teen pregnancy and out-of-wedlock births are declining. Our leadership is unrivaled around the world as we work for peace and freedom and security.

Still, as I said in the State of the Union Address, these good times do not give us the opportunity to rest or withdraw. Instead, if we are wise, we will use this as a time to act and to build, to secure our prosperity and strengthen our future, first of all, by not spending this budget surplus we waited 30 years for before it exists and putting Social Security first, saving Social Security for the 21st century so that the baby boom generation does not either bankrupt Social Security
