

The Commission's recommendations focus on assuring a professional police service in Northern Ireland that meets the highest possible standards and that enjoys the support of the community as a whole. The Commission's approach draws on best practices from other police forces, including those in the United States. I am pleased that two distinguished Americans served on the Patten Commission, and I commend Chris Patten and all the members of the Commission for their efforts.

### **Statement on the Convention Concerning Safety and Health in Mines**

*September 9, 1999*

Today I am sending to the United States Senate for advice and consent to ratification International Labor Organization (ILO) Convention Number 176, the "Convention Concerning Safety and Health in Mines." I have previously submitted to the Senate ILO conventions on employment discrimination (Convention Number 111) and the worst forms of child labor (Convention Number 182). Taken together, these steps demonstrate the importance I place on the ILO's work and my commitment to work together with labor and business interests through the ILO to raise labor standards around the world.

Mining has long been recognized as one of the most dangerous jobs in the world. Men, women—and sometimes even children—are exposed to hazards that can claim their lives or destroy their health. Mining employs more than 30 million people worldwide. Although that figure accounts for only one percent of the world's entire work force, mining is responsible for about 8 percent of fatal accidents at work, or around 15,000 per year. Despite the considerable advances in safety and health throughout this century, mining remains one of the most hazardous occupations worldwide.

In the United States, miners are protected by a strong and effective Federal statute, enforced by the Mine Safety and Health Administration in the Department of Labor. A tripartite panel of American Government,

labor, and business representatives has reviewed the Convention and has concluded that the United States can ratify Convention 176 without changing our laws or regulations. But in other countries, miners may lack the legal protections they need and deserve. I urge the Senate to give its advice and consent to ratification of this Convention, to help ensure safety and healthful working conditions for miners the world over.

As an institution, the International Labor Organization plays a vital role in our efforts to put a human face on the global economy. My administration, led by Secretary of Labor Alexis M. Herman and joined by our partners in labor and business, will continue to support the efforts of the ILO.

I look forward to working with the Senate Foreign Relations Committee and the Senate leadership to advance Convention Number 176, and the other ILO conventions, toward ratification.

### **Message to the Senate Transmitting the Convention Concerning Safety and Health in Mines**

*September 9, 1999*

*To the Senate of the United States:*

With a view to receiving the advice and consent of the Senate to ratification of the Convention (No. 176) Concerning Safety and Health in Mines, adopted by the International Labor Conference at its 82nd Session in Geneva on June 22, 1995, I transmit herewith a certified copy of that Convention.

The report of the Department of State, with a letter from the Secretary of Labor, concerning the Convention is enclosed.

As explained more fully in the enclosed letter from the Secretary of Labor, current United States law and practice fully satisfies the requirements of Convention No. 176. Ratification of this Convention, therefore, would not require the United States to alter in any way its law or practice in this field.

Ratification of additional ILO conventions will enhance the ability of the United States to take other governments to task for failing to comply with the ILO instruments they have ratified. I recommend that the Senate
