

was intended and what I announced would be done, after extensive consultation with our commanders back in 1993. I believe that the next President, if he wants to change the policy, will have to get the Congress to change the law.

Q. A quick followup on that. Wouldn't litmus tests like that have disqualified somebody like Colin Powell from serving as Joint Chiefs?

The President. I think that I'm going to leave the appointment process to the next President. I'm not going to get involved in this election right now. I think that there have been, we know, going back all the way to the First World War, we have clear evidence that there have been gays in the military who have served with great distinction. I think it's quite interesting that most of the Vietnam veterans, combat veterans in the United States Congress, including Senators Robb and Senator Kerry, just to mention two, have felt that—both Senator Kerry and Kerrey and Senator Robb—have felt that the policy ought to be changed and supported my original position.

So I would like to find some way for people to be honest, to obey the law, and to serve with distinction in the military. So I think that is where our focus ought to be, and the next President will have to figure out how to do that. But I think there will have to be a change in the law.

Q. Mr. President, the polls show that your wife is trailing right now. Do you have any advice for her?

The First Lady. Thank you so much.

Moving In

Q. What was the first night like?

The President. We had a wonderful time. We don't have a television yet. [*Laughter*]

Q. So how did you watch the debate?

The President. We didn't. They have a tape for me. I'm going to watch it tonight when I get home. So I had a tape. So we brought up our CD player, and I gave Hillary one of those South African radios that you crank—have you seen them?

The First Lady. Solar-powered radios.

The President. We bought them—and I got it in Washington at the Discovery store. You crank it up, and it's run either by solar

power or by hand crank, but you never need a plug or anything. So we listened to the radio last night. It was quite wonderful.

Q. [*Inaudible*]*—*what it was like being in the house for the first time in 17 years, your own house?

The First Lady. We loved it. Well, it was a little overwhelming because there is so much to be done, and we stayed up very late, working on getting things organized and put away. And then we're going to be back together next week, and we'll keep the process going until we finally get things moved in.

But it was wonderful having a chance to be here. My mother is with us. We just had a great time.

Q. How late were you up?

The First Lady. Oh, gosh.

The President. Past 1 a.m.

NOTE: The exchange began at 11:28 a.m. outside the Chappaqua residence. In this exchange, a reporter referred to Mayor Rudolph W. Giuliani of New York City. A tape was not available for verification of the content of this exchange.

Message on the Observance of Id al-Fitr, 2000

January 6, 2000

Warm greetings to Muslims across the United States and around the world as the holy month of Ramadan comes to a close and you celebrate the festival of Id al-Fitr.

The month of fasting that Muslims everywhere are completing is not only a sacred duty; it is also a powerful teaching, a gift from Islam to the world. It reminds not just Muslims but all people of our obligation to aid those who face poverty and suffering. It reminds us that we must work together to build a better, more humane world.

We hope and pray for a world where all faiths are respected; where people of different beliefs and ethnic backgrounds can live together in harmony, finding strength and joy in our differences and in our common humanity. And we pray that the new moon will bring a new era of peace between nations—in the Middle East and all across the world—so people can emerge from the

shadows of violence and make better lives for their children.

Bill Clinton

**Remarks on Departure for
Shepherdstown, West Virginia, and
an Exchange With Reporters**

**National Plan for Information System
Protection**

The President. Good morning. I want to thank Secretary Daley and President Rose of James Madison University, who has worked with eight other institutions of higher education to do information technology security training, and Dick Clarke from the NSC and all the others who worked on this project.

I want to talk just a moment about steps we are taking today to defend our citizens from those who would use cyberspace to do us harm. There has never been a time like this in which we have the power to create knowledge and the power to create havoc, and both those powers rest in the same hands.

We live in an age when one person sitting at one computer, can come up with an idea, travel through cyberspace, and take humanity to new heights. Yet, someone can sit at the same computer, hack into a computer system and potentially paralyze a company, a city, or a government.

Thanks to the hard work of many people, our computer systems were ready for Y2K. But that experience did underscore how really interconnected we all are. Today, our critical systems, from power structures to air traffic control, are connected and run by computers. We must make those systems more secure so that America can be more secure.

Today we are releasing a national plan to defend America's cyberspace, the product of a 3-year effort. This plan is not the end of the discussion, but the beginning of a dialog with Congress, with the American people, and especially with the private sector. We need to do more to bring people into the field of computer security. That's why I am proposing a new program that will offer college scholarships to students in the field of

computer security in exchange for their public service afterward. This program will create a new generation of computer security specialists who will work to defend our Nation's computers.

We also need to accelerate and broaden our research into computer security. Today I am proposing to create a new institute that will fill research gaps that neither public nor private sectors are filling today. The Institute for Information Infrastructure Protection will bring to bear the finest computer scientists and engineers from the private sector, from universities, and from other research facilities to find ways to close these gaps.

As part of the 2001 budget, I am requesting \$91 million for these and other reforms as part of an overall \$2 billion budget to help meet our security challenges. I will work hard to get these measures passed. I will continue to work equally hard to uphold the privacy rights of the American people, as well as the proprietary rights of American businesses. As I said before, it is essential that we do not undermine liberty in the name of liberty.

Information technology has helped to create the unprecedented prosperity we enjoy at the end of the 20th century. This morning we will announce that the unemployment rate for all of this past year was 4.2 percent. That's the lowest in 30 years, the lowest annual unemployment rate since 1969, the lowest annual minority unemployment rates for African-Americans and Hispanics ever recorded. It is important to recognize the role technology has played in this remarkable economic prosperity. But it is also important to recognize the challenges that we face out there in the security area.

I hope that this will be a completely non-partisan issue and that we will work together to ensure that information technology will create unprecedented prosperity in the 21st century, in an atmosphere and environment that makes all Americans more secure.

Thank you very much.

Elían Gonzalez

Q. Mr. President—

The President. One each. Go ahead, John [John Roberts, CBS News].

Q. Governor Bush of Florida is appealing to you to rescind the INS order regarding
