

Weekly Compilation of
**Presidential
Documents**

Monday, April 24, 2000
Volume 36—Number 16
Pages 839–888

Contents

Addresses and Remarks

- California
 - Democratic National Committee dinner in Beverly Hills—851
 - Giant Sequoia National Monument, proclamation signing in Sequoia National Forest—843
 - Question-and-answer session with community in East Palo Alto—855
- Georgia, dinner for Representative John Lewis in Atlanta—840
- Illinois, COMDEX 2000 Spring Conference in Chicago—871
- National Campaign Against Youth Violence, videotape remarks—884
- National economy—849
- New Mexico
 - Internet video conference in Shiprock—865
 - Navajo Nation in Shiprock—862
- Oklahoma, Oklahoma City National Memorial dedication ceremony in Oklahoma City—880
- Radio address—850

Communications to Congress

- Bosnia and Herzegovina, letter transmitting report on efforts to achieve sustainable peace—882
- Gun safety, proposed legislation, letter—886
- Nuclear proliferation prevention, letter transmitting report—880

Communications to Federal Agencies

- Burma, memorandum on report to Congress regarding conditions in and U.S. policy toward—882
- International education policy, memorandum—878
- Palestine Liberation Organization, memorandum on waiver and certification of statutory provisions—885

Interviews With News Media

- Exchange with reporters
 - Rose Garden—882
 - Sequoia National Forest, CA—849

Letters and Messages

- Colorado, community in Littleton, message—884
- Easter message—885
- Passover, message—865

Meetings With Foreign Leaders

- Palestinian Authority, Chairman Arafat—882

Proclamations

- Establishment of the Giant Sequoia National Monument—846
- National Recall Round-Up Day—839

(Continued on the inside of the back cover.)

WEEKLY COMPILATION OF PRESIDENTIAL DOCUMENTS

Published every Monday by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, the *Weekly Compilation of Presidential Documents* contains statements, messages, and other Presidential materials released by the White House during the preceding week.

The *Weekly Compilation of Presidential Documents* is published pursuant to the authority contained in the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15), under

regulations prescribed by the Administrative Committee of the Federal Register, approved by the President (37 FR 23607; 1 CFR Part 10).

Distribution is made only by the Superintendent of Documents, Government Printing Office, Washington, DC 20402. The *Weekly Compilation of Presidential Documents* will be furnished by mail to domestic subscribers for \$80.00 per year (\$137.00 for mailing first class) and to foreign subscribers for \$93.75 per year, payable to the Superintendent of Documents, Government Printing Office, Washington, DC 20402. The charge for a single copy is \$3.00 (\$3.75 for foreign mailing).

There are no restrictions on the republication of material appearing in the *Weekly Compilation of Presidential Documents*.

Week Ending Friday, April 21, 2000

**Statement on Congressional Action
on Africa and Caribbean Basin Trade
Legislation**

April 14, 2000

The bipartisan agreement reached by the House and Senate on the Africa and Caribbean Basin trade legislation is a major step toward enactment of these historic initiatives. This bill is a win-win proposition for the United States and our friends in Africa and the Caribbean Basin. It will boost investment, economic growth, and job creation in these countries, while improving the global competitive position of our own textile industry. It will help promote economic reform, reduce poverty, and broaden participation in the benefits of the global economy. I congratulate congressional leaders from both parties who worked hard to reach this agreement. I urge Congress to complete the remaining work on the bill rapidly so that final approval can occur during the first week after its Easter recess.

**Statement on National Youth Service
Day**

April 14, 2000

This weekend, as we celebrate the 12th annual National Youth Service Day, I want to recognize the millions of young Americans across the country who give to their communities day in and day out. They are rebuilding our Nation's schools and neighborhoods and sparking a new spirit of civic engagement. And they know that service is not the work of just a single day; it is the work of a lifetime.

In recent months we've had too many tragic reminders that young people pay the price when bonds of community and responsibility become frayed. But we should also remember that our children are our greatest re-

source and that, if we are to build a stronger, safer Nation, we should begin by empowering young people to make a difference. That's why I am so proud of the young citizens who have served in AmeriCorps. And that's why I am so proud of the many contributions that so many of our youth are making on this special day. Through the leadership of young Americans, all of us—whatever our age—can help keep alive our sense of opportunity, responsibility, and community.

**Proclamation 7294—National Recall
Round-Up Day, 2000**

April 14, 2000

*By the President of the United States
of America*

A Proclamation

Every year, the Consumer Product Safety Commission (CPSC) researches the safety of more than 15,000 types of products used by the American people and secures the recall of defective or potentially dangerous products. Last year alone, the CPSC negotiated almost 300 recalls involving more than 74 million individual consumer products that presented a significant risk to the public. Despite these recalls and additional safety alerts issued by the CPSC, many consumers are still using products that may seriously injure or even kill them or their children, and people are still able to purchase these products at flea markets, secondhand stores, and garage or yard sales.

The CPSC estimates that some 29 million Americans will suffer injuries involving consumer products this year, and 22,000 will lose their lives. To reduce these tragic statistics, the CPSC is working to increase public awareness of recalled products and to ensure that such potentially hazardous products are

removed from people's homes. As a vital part of this effort, the CPSC is conducting the fourth annual Recall Round-Up Campaign this year in partnership with the U.S. Postal Service. With the cooperation and active involvement of State and local officials, health and safety organizations, the media, and community groups, this innovative public safety campaign will sponsor activities in communities across the Nation to publicize the products that have been recalled, to encourage Americans to repair, return, or destroy any recalled products that may still be in their homes or businesses, and to urge them to stay alert and informed about such products when purchasing secondhand items.

This year's Recall Round-Up will focus on a number of previously recalled consumer products that pose a threat to children in particular, including certain infant car seats; swimming pool dive sticks that can cause impairment injuries to young children; television carts that can tip over; tubular metal cribs that can entrap children; and old cribs, hair dryers, and children's drawstring jackets that fail to meet the most current safety standards. Last year's campaign succeeded in reaching some 55 million consumers; this year, with the assistance of the U.S. Postal Service, the CPSC hopes to reach millions more—especially parents and child care providers—with these lifesaving messages.

Now, Therefore, I, William J. Clinton, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim April 18, 2000, as National Recall Round-Up Day. I call upon all Americans to observe this day by working with safety, health, and consumer agencies and other appropriate community organizations to organize and conduct local round-ups of dangerous and defective consumer products and to warn parents, child care providers, and the general public about the hazards of using recalled consumer products.

In Witness Whereof, I have hereunto set my hand this fourteenth day of April, in the year of our Lord two thousand, and of the

Independence of the United States of America the two hundred and twenty-fourth.

William J. Clinton

[Filed with the Office of the Federal Register, 8:45 a.m., April 19, 2000]

NOTE: This proclamation was published in the *Federal Register* on April 20. This item was not received in time for publication in the appropriate issue.

**Remarks at a Dinner for
Representative John Lewis
in Atlanta, Georgia**

April 14, 2000

Thank you very much. Thank you, ladies and gentlemen, for that wonderful welcome. I want you to know what I've been thinking, sitting over here. I'm sitting here thinking to myself, now that Reverend Lewis has preached—[laughter]—and Sister Battle has sung—[laughter]—there's nothing left for me to do but pass the plate, and that's already been done. The invitation was issued in advance; I'm just preaching to the saved. [Laughter]

Let me say to all of you how profoundly grateful I am to be here, to be joined by John and Lillian and John Miles and the whole Lewis family; Governor and Mrs. Barnes; Mayor and Mrs. Campbell; Congressman Bishop; former Congressman Buddy Darden and Lillian. And I want to thank Brock Peters; he's been a great master of ceremonies. And Reverend Belin also sang us a pretty good prayer, didn't he? [Applause] I thought he was great.

I want to congratulate Ray Strother on that beautiful, beautiful film. He did a wonderful job, and I thank him.

You know, John was up here talking about being 60 years old, and I was thinking about the first time I met him, when I was just a young man back in the seventies, held no office, wanted to get elected to something in my State, and was interested in helping a fellow from Georgia named Carter get elected President. And I remember John talking to me about all these stories we saw in the movie. Twenty-five years ago, my eyes were big. I thought one of the reasons I liked

politics and one of the reasons I'm a Democrat is, I can sit here, a 29-year-old kid, and talk to John Lewis about his life. If anybody had ever told me 25 years later I'd be back here talking about a distinguished 60-year-old Congressman, and I'd be President, I'd have thought they were nuts. [Laughter] But I'm honored to be here.

It's amazing how quickly time passes. I was looking at John Miles Lewis talking about his daddy. Didn't you think he did a good job, by the way? I thought he was great. [Applause] But Lillian and John and John Miles and I were standing up there getting our picture taken. And John was playing his daddy role. And he said, "I don't know about that hair." I said, "John, let's don't act like we're old." I said, "If I was 23 and I could have hair like that, I'd do it in a bird-dog minute." [Laughter] I thought it was great.

That's true. When John Lewis introduced me a few weeks ago in Selma and we were standing at the Edmond Pettus Bridge, he gave a beautiful statement like he did tonight. And then when he introduced me, I said, "John, the only thing you said I'd disagree with is, you said the President didn't have to be in Selma today." Because I did have to be there; because it was my story, too; because what was done at Selma before and after freed me, too.

And what I want to say, I had to be here tonight, too. I have loved John Lewis from the first day I met him. I would feel that way if he had never gone to Congress and certainly if I had never become President. I love Lillian. She and I were over here crying at the gospel singing tonight.

John Lewis and two of his colleagues—then colleagues—Congressman Mike Espy from Mississippi and Bill Jefferson from New Orleans, met with me in 1991 when I wanted to run for President, and they pledged their friendship and support to me when only my mother and my wife thought I could be elected. [Laughter]. And then he went out trying to validate me to these very skeptical northern Democrats. They sort of agreed with President Bush who used to refer to me as the Governor of a small southern State. [Laughter] And I was so dumb, I thought that was a good thing. [Laughter] I was kind of proud of that. And then through all the

dark days of the campaign, John was there, and Georgia was there. So I had to be here tonight for that reason.

I had to be here tonight because without John and the many people in our Congress that he influenced, the prosperity and peace and social progress we enjoy could not have been achieved over these last 7 years. And I had to be here tonight most of all because, just as much today as 40 years ago, John Lewis' life reflects what I think is the central lesson we all have to learn about life, and that is that we find more meaning in compassion than in judgment, and we find more meaning in unity than division.

John has somehow incorporated into himself the spirit that elevated Gandhi and Dr. King, that freed Nelson Mandela of his hate and bitterness in spite of 27 long years in prison. He always says that one of his favorite hymns is "This Little Light of Mine." Well, his little light has certainly shined. And I've tried to make it mine.

And I say that because for all the good that's happened in the last 40 years, we still have a lot of bridges to cross. There are still a lot of people who are just as smart and hard-working as we are who couldn't afford to be here tonight because they haven't participated in our recovery. Then there are a lot of people who are here tonight, but they're serving our food. Their kids deserve a chance to go to college, too. They ought to be paid a decent wage, too. They ought to have access to health care, too.

And for all the bridges we have crossed, even in the last 2 years, there are people in this country who have been shot because they were black or Asian or Jewish, people who have been falsely accused of terrorism because they were Muslims, a young boy stretched out on a rack to die in Wyoming because he was gay. So we've still got a few bridges to cross.

But I close with this thought, so you know why I came here for someone I truly love. People ask me all the time, you know, "Well, what do you think your greatest achievement was? What do you think your biggest disappointment was? If you had one wish for America, what would it be?"

And if I had one wish—God came down to me tonight and said, "It's time to pack

it up and go. You can't finish your term. But I'm going to give you one wish. I'm no genie; no three wishes. Just one." I would pray that somehow America could be infected, every single one of us, with the spirit that has animated John Lewis' life. Because, you know, all of us, we get so puffed up with the importance of what we're doing and our positions. And I finally got so frustrated trying to reach people who were fighting with each other that I—I had a gift that was given to me last year, and I just put it smack dab on the table that you see when the Oval Office is on television, you know. And I'm there meeting with a world leader, and there's two chairs and two couches, and there's a little table in between. On that table, I have a gift, a Moon rock that Neil Armstrong took off the Moon in 1969. He brought it to me for safe-keeping—only during the period of my service, I might add. [*Laughter*] It belongs to you, to NASA.

But it is this vacuum-packed Moon rock, and it is 3.6 billion years old. So when people get to fighting each other and they are just about to call each other names, and they are just about to go over the top, and we're sitting there in the Oval Office—including me; I get angry, you know—I call a timeout. And I say, "Here, everybody. See that rock there? It's 3.6 billion years old. Chill out; we're all just passing through here." [*Laughter*]

Ultimately, the lesson of the civil rights movement was that what freed us is that the people who were oppressed—not that they got legal rights. It's that they got legal rights and we overcame past problems, and then they let it go, and they forgave us, and they were able to go on.

So many problems in the world today are still caused by the fact that we are, A, afraid of those who are different from us. And once we fear people it is easy to dehumanize them, and once you dehumanize them, it is easy to justify hurting them or not helping them when they deserve a hand up. And then it is a short step from there to violence.

The next big problem is that almost all of us at some point in our lives find it impossible to define our importance, our meaning, unless it is with negative reference to another human being or group. And there's not a soul in here who hasn't done that. You make some

big mistake, and you say, "Well, at least I'm not them. I'm not like that. I didn't do that. We're not there." And I have spent so much time as your President just trying to get the Democrats and Republicans together to get over years of accumulated frustration and hurts and angers and perceived slights and the deep need that both of us sometimes have to at least feel we're better than them.

I've had to send young Americans in to risk their lives for the freedom of Muslims in Bosnia and Kosovo so that Europe has a chance to be free and at peace and we don't drift back into a world war situation. To try to stop the conflict in Northern Ireland or try to stop the conflicts and make peace in the Middle East or try to help the tribal differences in Africa get sorted out—every one of them is rooted in the fundamental fact that people have a natural tendency to define the pluses in their life in terms of the negative in someone else's.

And all those beautiful things John says about the beloved community, what it basically means is you'd rather hold hands than clench your fist. You don't mind being different from other people. You celebrate it; you enjoy it; you laugh about it; it makes life more interesting. But in the end, you know somehow, when you strip it all away, our common humanity is the most important fact of life on this Earth. Now, that's what John Lewis' life in public service represents to me.

So if I could do one thing for America, I would move us closer to being one America, so we could hold our trembling house down. But to do it we'll have to be more like him. We'll have to forgive all those people that beat us up, at least with words. We'll have to get over all of our—not just our perceived but our real beefs. Everybody here has got a real beef against somebody. Everybody here has been the subject of some unfairness, some piece of bad luck, some people's mean-spiritedness.

When you strip it all away, the thing that makes us want to be here for John tonight is not just that he got his brains beat out, nearly, 35 years ago for all our freedom, but that he let it go. He's not mad at anybody. He treats people right, doesn't think he's better than the rest of us. He believes we can

get more out of holding hands than clenching fists.

I wanted to come here tonight because America and the world need more of what is in John Lewis' heart. And for that, I am eternally grateful and full of love.

Thank you very much.

NOTE: The President spoke at 7:15 p.m. in the Grand Salon at the Atlanta Airport Hilton and Towers. In his remarks, he referred to soprano Kathleen Battle; Representative Lewis' wife, Lillian, and son, John Miles Lewis; Gov. Roy E. Barnes of Georgia and his wife, Marie; Mayor Bill Campbell of Atlanta and his wife, Sharon; Brock Peters, master of ceremonies; former Representative George (Buddy) Darden and his wife, Lillian; Rev. Roderick Dwayne Belin, who delivered the invocation; media consultant Raymond D. Strother, who produced and directed a brief biographical film of Representative Lewis; and former astronaut Neil Armstrong. This item was not received in time for publication in the appropriate issue.

**Remarks on Signing a Proclamation
Establishing the Giant Sequoia
National Monument in Sequoia
National Forest, California**

April 15, 2000

Thank you very much. Thank you, and good morning. I think we should all be very grateful for the beautiful day we have. I know it was exciting that it snowed here last night—[laughter]—but I was watching Alexander give his fine remarks, and I was thinking that growing older has some merit, but one thing it doesn't have is the ability to withstand cold better. [Laughter] We took this whole walk, and there he is in his short-sleeve shirt, and he never flinched, he never shivered, he just walked right on.

I want to thank Alexander for his remarks and for his example and the work that he has done and the other young people he has exposed to this magnificent grove. I want to thank Secretary Glickman and Art Gaffrey. Secretary Glickman did a lot of work on this, and he talked about it in advance, and I'll say a few more words about it, but I appreciate it. Art told me he's been here almost 5 years now.

And I want to thank Marta Brown, who is, herself, a remarkably devoted and accomplished public citizen. I wish George were here with us today. I think he's smiling down on us, and I'm glad you could be a part of this. Thank you, Mike Dombeck and Jim Lyons. And I'd also like to thank my main environmental adviser, George Frampton, who runs our Council on Sustainable Development, Environmental Quality, for being here.

I'd like to thank the representatives of the Tule River Tribe who are here, who also cherished these great trees. Thank you for coming.

About a hundred years ago, Theodore Roosevelt dedicated America's first national monuments. He said he was doing it because we couldn't improve upon our native landscape. In his words, "The ages have been at work on it, and man can only mar it. What you can do, is keep it for your children and your children's children."

Well, as we have already heard today, these giant sequoias clearly are the work of the ages. They grow taller than the Statue of Liberty, broader than a bus. They are the largest living things on this Earth, so perfectly adapted to their environment that one has never been known to die of old age. And as has already been said, many we have seen today are more than 1,500 years old. They began when America was not even imagined and Europe was in the Dark Ages.

Once these groves flourished all across the American West. Today, they exist only here in the Sierras. Our second national park was created in 1890 to protect them. Yet half the remaining groves lie outside the national park. And although sequoias on Federal lands are currently protected from logging, the environment around them must also be protected for the great trees to grow and reproduce.

That is why we're here today. We're looking forward to the first Earth Day of the 21st century, and I think the best way to celebrate it is to designate the Trail of 100 Giants, more than 30 nearby sequoia groves, and the magnificent forest that surrounds them, the Giant Sequoia National Monument.

These lands will continue to be managed by the Forest Service, as it once again embraces the conservation ethic that inspired its creation 95 years ago. More and more Americans are discovering our national forests, with places to hike, camp, ride horses, enjoy a few hours of quiet contemplation. Years from now, Americans will come here to do all these things, and these majestic trees will continue, as John Muir said, to “preach God’s forestry fresh from heaven.”

I know there have been strong and sometimes conflicting views about the best way to manage these Federal lands. Secretary Glickman recommended that they be protected after careful analysis and consultation with the residents of the area, State, tribal, and local officials, and Members of Congress. The Forest Service will work with the local community closely to develop a long-term plan. We want to ensure that all of the interests are respected and that we help to bring jobs and opportunity to the area.

This is not about locking lands up; it is about freeing them up for all Americans for all time. We’re here because we recognize that these trees, though they live to be very old and grow very large, like life itself are still fragile. The roots are surprisingly shallow, and the greatest threat to the trees’ life is any disturbance to the tenuous balance between the tree and the ground that anchors it.

Thirty years ago next week, Americans celebrated the first Earth Day because they understood that we, too, have shallow roots on this planet and that our future depends upon balance among all living things. The story since then is a story of American progress to protect and preserve that balance.

Since 1970, we’ve cleaned up many of our worst toxic waste sites and waterways, cut toxic factory emissions almost in half. The American people have made environmental protection part of their daily lives. They have demanded that government and industry act to protect our national treasures.

I am profoundly grateful for the opportunities that Vice President Gore and I have had over this last 7 years and a few months to act as stewards of our environment. We have adopted the strongest air quality protec-

tions ever, improved the safety of our drinking water and food, cleaned up about 3 times as many toxic waste sites as the two previous administrations combined, helped to promote a new generation of fuel-efficient vehicles and vehicles that run on alternative fuels, launched new efforts to fight the sprawl that threatens so many of our quality of life.

We’ve helped hundreds of communities to turn dangerous brownfields deserted by industry into safe, productive space. And yes, we have tried to protect a lot of our Nation’s precious treasures. It seems to me that these last 7 years should finally have put to rest the idea that you can’t have a strong economy and a cleaner, safer, more balanced environment. And I hope we will never have that debate again.

On this Earth Day I would like to emphasize three things. First, obviously, this national monument. Second, what more we can do to preserve the most beautiful places in this country for all our children’s futures. We have a lands legacy initiative to protect green spaces, from the most remote mountains to the nearest city park. This year I’ve asked Congress to provide \$1.4 billion to protect those special places, including nearby Dillingwood Grove, the last privately held grove of giant sequoias. I hope we get the money for that, too.

But the thing I want all of you to understand is that if this fund passes, most of the money will go to States and communities to help them pursue their own conservation priorities, including communities here in California. It will empower people all across America to protect those things that are most dear to them, close at hand, on a permanent basis.

I’m happy to report that there’s strong bipartisan support for this. We had a great meeting last week at the White House with Republican and Democratic congressional leaders, and I think we’ve got a good chance to build the lands legacy initiative this year.

Second, we need to invest in the future of our environment not just at home but around the world. Tropical forests—where a lot of us would like to be right now—[laughter]—tropical forests are home to more than half the known species on Earth. Yet they’re being lost at the rate—now, think about this;

we came here to save these trees—tropical forests, the home of many indigenous peoples, as well, are being lost at the rate of 50 acres a minute. This year I have proposed a greening the globe initiative to help developing countries protect their endangered forests and better manage their natural heritage.

And all these efforts to preserve biodiversity are important. But the last point I'd like to make is, they won't do much good—if I get killed by this falling ice—[laughter]—they won't do much good unless we band together to meet the greatest environmental challenge of the new century, climate change and global warming.

The 1990's were the hottest decade on record. Scientists say that the temperature rise is at least partly due to human activity, and that if unchecked, climate change will result in more storms and floods, more economic disruptions, more permanent flooding of coastal areas, perhaps the entire flooding of island nations, and more threats to unique habitats such as the one in which we are today.

So the last point I want to make is, I hope all of you will help us to build a national consensus to cut down our emissions of greenhouse gases and to work with others around the world to use existing technologies to help them do the same. I urge those in Congress who have opposed our efforts to drop their opposition, to recognize that we now have the technology—and we will soon have much more—to cut emissions while continuing to grow the economy.

For example, we have the technology to reduce by 85 percent the amount of energy it takes to run a refrigerator. We will soon have cars on the street that routinely get more than 60 miles a gallon and new technologies such as fuel cells and biofuels to give us the equivalent of hundreds of miles from every gallon of gasoline. Just by changing the lights in the White House, I cut the power bills \$100,000 a year. [Laughter] And we put in a new heating system, a more fuel efficient roofing system.

If the changes we made in the White House were made in every Federal building, which I'm trying to get done, we would take the equivalent—we would reduce greenhouse gases so much it would be the equivalent

of taking 1.7 million cars a year off the road. These things are out there now. They will generate jobs; they will generate economic activity. And it is profoundly important that all of us who think about these things continue to talk to our friends and neighbors until we build a vast national consensus for concerted action.

Now, I've asked Congress for over \$2 billion for this, to fund local, national, and international efforts to reduce greenhouse gases, to fund clean technologies, to provide tax incentives for those who produce and those who purchase these kinds of products.

Now, before I sign a proclamation, let me just remind you that for over a hundred years, beginning with the residents of Visalia, California, Americans have sought to save these giant sequoias. Earth Day brought groups of Americans together on a crusade to save the treasures of our planet.

Today let's remember, even here on the Trail of 100 Giants, the global village presses even closer upon us. We have to look within our communities and beyond our borders for allies to deal with our common environmental challenges. We're doing our part today to make sure that the monarchs after we're long gone, rooted strong in the web of nature that sustains us all.

It has been a great honor for me to be here. I thank all of you who have supported these decisions. I thank you, again, Secretary Glickman. But I ask you, when you walk out of here today, remember that not every person can come to this gorgeous giant grove, but every person can benefit from our continued efforts to improve our environment and sustain our natural heritage. And we still have a very great deal to do.

Thank you very much.

NOTE: The President spoke at 9:10 a.m. on the Trail of 100 Giants. In his remarks, he referred to Eagle Scout Alexander Reed-Krase, who introduced the President; Arthur L. Gaffrey, forest supervisor, Sequoia National Forest; and Marta Macias Brown, widow of former Representative George E. Brown, Jr.

**Proclamation 7295—Establishment
of the Giant Sequoia National
Monument**

April 15, 2000

*By the President of the United States
of America*

A Proclamation

The rich and varied landscape of the Giant Sequoia National Monument holds a diverse array of scientific and historic resources. Magnificent groves of towering giant sequoias, the world's largest trees, are interspersed within a great belt of coniferous forest, jeweled with mountain meadows. Bold granitic domes, spires, and plunging gorges texture the landscape. The area's elevation climbs from about 2,500 to 9,700 feet over a distance of only a few miles, capturing an extraordinary number of habitats within a relatively small area. This spectrum of ecosystems is home to a diverse array of plants and animals, many of which are rare or endemic to the southern Sierra Nevada. The monument embraces limestone caverns and holds unique paleontological resources documenting tens of thousands of years of ecosystem change. The monument also has many archaeological sites recording Native American occupation and adaptations to this complex landscape, and historic remnants of early Euroamerican settlement as well as the commercial exploitation of the giant sequoias. The monument provides exemplary opportunities for biologists, geologists, paleontologists, archaeologists, and historians to study these objects.

Ancestral forms of giant sequoia were a part of the western North American landscape for millions of years. Giant sequoias are the largest trees ever to have lived, and are among the world's longest-lived trees, reaching ages of more than 3,200 years or more. Because of this great longevity, giant sequoias hold within their tree rings multi-millennial records of past environmental changes such as climate, fire regimes, and consequent forest response. Only one other North American tree species, the high-elevation bristlecone pine of the desert mountain ranges east of the Sierra Nevada, holds

such lengthy and detailed chronologies of past changes and events.

Sequoias and their surrounding ecosystems provide a context for understanding ongoing environmental changes. For example, a century of fire suppression has led to an unprecedented failure in sequoia reproduction in otherwise undisturbed groves. Climatic change also has influenced the sequoia groves; their present highly disjunct distribution is at least partly due to generally higher summertime temperatures and prolonged summer droughts in California from about 10,000 to 4,500 years ago. During that period, sequoias were rarer than today. Only following a slight cooling and shortening of summer droughts, about 4,500 years ago, has the sequoia been able to spread and create today's groves.

These giant sequoia groves and the surrounding forest provide an excellent opportunity to understand the consequences of different approaches to forest restoration. These forests need restoration to counteract the effects of a century of fire suppression and logging. Fire suppression has caused forests to become denser in many areas, with increased dominance of shade-tolerant species. Woody debris has accumulated, causing an unprecedented buildup of surface fuels. One of the most immediate consequences of these changes is an increased hazard of wildfires of a severity that was rarely encountered in pre-Euroamerican times. Outstanding opportunities exist for studying the consequences of different approaches to mitigating these conditions and restoring natural forest resilience.

The great elevational range of the monument embraces a number of climatic zones, providing habitats for an extraordinary diversity of plant species and communities. The monument is rich in rare plants and is home to more than 200 plant species endemic to the southern Sierra Nevada mountain range, arrayed in plant communities ranging from low-elevation oak woodlands and chaparral to high-elevation subalpine forest. Numerous meadows and streams provide an interconnected web of habitats for moisture-loving species.

This spectrum of interconnected vegetation types provides essential habitat for wildlife, ranging from large, charismatic animals to less visible and less familiar forms of life, such as fungi and insects. The mid-elevation forests are dominated by massive conifers arrayed in a complex landscape mosaic, providing one of the last refugia for the Pacific fisher in California. The fisher appears to have been extirpated from the northern Sierra Nevada mountain range. The forests of the monument are also home to great gray owl, American marten, northern goshawk, peregrine falcon, spotted owl, and a number of rare amphibians. The giant sequoias themselves are the only known trees large enough to provide nesting cavities for the California condor, which otherwise must nest on cliff faces. In fact, the last pair of condors breeding in the wild was discovered in a giant sequoia that is part of the new monument. The monument's giant sequoia ecosystem remains available for the return and study of condors.

The physiography and geology of the monument have been shaped by millions of years of intensive uplift, erosion, volcanism, and glaciation. The monument is dominated by granitic rocks, most noticeable as domes and spires in areas such as the Needles. The magnificent Kern Canyon forms the eastern boundary of the monument's southern unit. The canyon follows an ancient fault, forming the only major north-south river drainage in the Sierra Nevada. Remnants of volcanism are expressed as hot springs and soda springs in some drainages.

Particularly in the northern unit of the monument, limestone outcrops, remnants of an ancient seabed, are noted for their caves. Subfossil vegetation entombed within ancient woodrat middens in these caves has provided the only direct evidence of where giant sequoias grew during the Pleistocene Era, and documents substantial vegetation changes over the last 50,000 or more years. Vertebrate fossils also have been found within the middens. Other paleontological resources are found in meadow sediments, which hold detailed records of the last 10 millennia of changing vegetation, fire regimes, and volcanism in the Sierra Nevada. The multi-millennial, annual- and seasonal-

resolution records of past fire regimes held in giant sequoia tree-rings are unique worldwide.

During the past 8,000 years, Native American peoples of the Sierra Nevada have lived by hunting and fishing, gathering, and trading with other people throughout the region. Archaeological sites such as lithic scatters, food-processing sites, rock shelters, village sites, petroglyphs, and pictographs are found in the monument. These sites have the potential to shed light on the roles of prehistoric peoples, including the role they played in shaping the ecosystems on which they depended.

One of the earliest recorded references to giant sequoias is found in the notes of the Walker Expedition of 1833, which described "trees of the redwood species, incredibly large . . ." The world became aware of giant sequoias when sections of the massive trees were transported east and displayed as curiosities for eastern audiences. Logging of giant sequoias throughout the Sierra Nevada mountain range began in 1856. Logging has continued intermittently to this day on non-federal lands within the area of the monument. Early entrepreneurs, seeing profit in the gigantic trees, began acquiring lands within the present monument under the Timber and Stone Act in the 1880s. Today our understanding of the history of the Hume Lake and Converse Basin areas of the monument is supported by a treasure trove of historical photographs and other documentation. These records provide a unique and unusually clear picture of more than half a century of logging that resulted in the virtual removal of most forest in some areas of the monument. Outstanding opportunities exist for studying forest resilience to large-scale logging and the consequences of different approaches to forest restoration.

Section 2 of the Act of June 8, 1906 (34 Stat. 225, 16 U.S.C. 431) authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon lands owned or controlled by the Government of the United States to be national monuments, and to reserve as a part thereof parcels of land, the limits of

which in all cases, shall be confined to the smallest area compatible with the proper care and management of the objects to be protected.

Whereas it appears that it would be in the public interest to reserve such lands as a national monument to be known as the Giant Sequoia National Monument:

Now, Therefore, I, William J. Clinton, President of the United States of America, by the authority vested in me by section 2 of the Act of June 8, 1906 (34 Stat. 225, 16 U.S.C. 431), do proclaim that there are hereby set apart and reserved as the Giant Sequoia National Monument, for the purpose of protecting the objects identified in the above preceding paragraphs, all lands and interests in lands owned or controlled by the United States within the boundaries of the area described on the map entitled "Proposed Giant Sequoia National Monument" attached to and forming a part of this proclamation. The Federal land and interests in land reserved consist of approximately 327,769 acres, which is the smallest area compatible with the proper care and management of the objects to be protected as identified in the above preceding paragraphs.

All Federal lands and interests in lands within the boundaries of this monument are hereby appropriated and withdrawn from entry, location, selection, sale, leasing, or other disposition under the public land laws including, but not limited to, withdrawal from locating, entry, and patent under the mining laws and from disposition under all laws relating to mineral and geothermal leasing, other than by exchange that furthers the protective purposes of the monument. Lands and interests in lands within the boundaries of the monument not owned by the United States shall be reserved as a part of the monument upon acquisition of title thereto by the United States.

The establishment of this monument is subject to valid existing rights.

Timber sales under contract as of the date of the proclamation and timber sales with a decision notice signed after January 1, 1999, but prior to December 31, 1999, may be completed consistent with the terms of the decision notice and contract. No portion of the monument shall be considered to be suit-

ed for timber production, and no part of the monument shall be used in a calculation or provision of a sustained yield of timber from the Sequoia National Forest. Removal of trees, except for personal use fuel wood, from within the monument area may take place only if clearly needed for ecological restoration and maintenance or public safety.

The Secretary of Agriculture shall manage the monument, along with the underlying Forest, through the Forest Service, pursuant to applicable legal authorities, to implement the purposes and provisions of this proclamation. The Secretary of Agriculture shall prepare, within 3 years of this date, a management plan for this monument, and shall promulgate such regulations for its management as deemed appropriate. The plan will provide for and encourage continued public and recreational access and use consistent with the purposes of the monument.

Unique scientific and ecological issues are involved in management of giant sequoia groves, including groves located in nearby and adjacent lands managed by the Bureau of Land Management and the National Park Service. The Secretary, in consultation with the National Academy of Sciences, shall appoint a Scientific Advisory Board to provide scientific guidance during the development of the initial management plan. Board membership shall represent a range of scientific disciplines pertaining to the objects to be protected, including, but not necessarily limited to, the physical, biological, and social sciences.

The Secretary, through the Forest Service, shall, in developing any management plans and any management rules and regulations governing the monument, consult with the Secretary of the Interior, through the Bureau of Land Management and the National Park Service. The final decision to issue any management plans and any management rules and regulations rests with the Secretary of Agriculture. Management plans or rules and regulations developed by the Secretary of the Interior governing uses within national parks or other national monuments administered by the Secretary of the Interior shall not apply within the Giant Sequoia National Monument.

The management plan shall contain a transportation plan for the monument that provides for visitor enjoyment and understanding about the scientific and historic objects in the monument, consistent with their protection. For the purposes of protecting the objects included in the monument, motorized vehicle use will be permitted only on designated roads, and nonmotorized mechanized vehicle use will be permitted only on designated roads and trails, except for emergency or authorized administrative purposes or to provide access for persons with disabilities. No new roads or trails will be authorized within the monument except to further the purposes of the monument. Prior to the issuance of the management plan, existing roads and trails may be closed or altered to protect the objects of interest in the monument, and motorized vehicle use will be permitted on trails until but not after December 31, 2000.

Nothing in this proclamation shall be deemed to diminish or enlarge the jurisdiction of the State of California with respect to fish and wildlife management.

There is hereby reserved, as of the date of this proclamation and subject to valid existing rights, a quantity of water sufficient to fulfill the purposes for which this monument is established. Nothing in this reservation shall be construed as a relinquishment or reduction of any water use or rights reserved or appropriated by the United States on or before the date of this proclamation.

Laws, regulations, and policies pertaining to administration by the Department of Agriculture of grazing permits and timber sales under contract as of the date of this proclamation on National Forest System lands within the boundaries of the monument shall continue to apply to lands within the monument.

Nothing in this proclamation shall be deemed to affect existing special use authorizations; existing uses shall be governed by applicable laws, regulations, and management plans.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the national monument shall be the dominant reservation.

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

In Witness Whereof, I have hereunto set my hand this fifteenth day of April, in the year of our Lord two thousand, and of the Independence of the United States of America the two hundred and twenty-fourth.

William J. Clinton

[Filed with the Office of the Federal Register, 8:45 a.m., April 24, 2000]

NOTE: This proclamation will be published in the *Federal Register* on April 25.

Exchange With Reporters in Sequoia National Forest

April 15, 2000

National Economy

Q. Mr. President—[inaudible]—inflation is becoming a problem again that's going to screw up the stock market as it did yesterday?

The President. Well, you know, I try never to talk about the movements of the market, but let me just say, I think the fact that oil prices have come down will make a substantial difference. And whenever we have a strong economic boom, it puts some strain on the housing markets, but we have open markets, so new products will come in and tend to drive inflation down there.

The projected inflation rate for the year is still quite modest. And the projected growth rate for the year is still quite strong. So I think if we stay with our economic policy and the American people productivity continues to increase, as it's going to, then I still think we'll have a very good year. If you look at all the elements of inflation—the fact that oil prices are coming down and that open markets will inevitably lead to a dampening of the prices of the component parts and the housing industry—and that's why the experts say that over the year we'll have very modest inflation. And I think, you know, everybody that invests their money will tend to look at what it's likely to be like over a year.

So all I can do is try to keep the economy strong, and that's what I'll do. And I think

the investment climate and markets will take care of themselves. They'll go up; they'll go down. But I think the long-term trends are quite positive.

Giant Sequoia National Monument Establishment

Q. [*Inaudible*]*—*who say the visit here is politically motivated and say you're trying to build an environmental legacy for yourself and the Vice President?

The President. Well, first of all, I think that when you can't win an argument, sometimes you just attack the person on the other side. [*Laughter*] The only issue here is whether we're doing the right thing. I have been doing this kind of thing for 7½ years now. I've been working on these issues. What I'm trying to do is to build a legacy for these children. And I think we did the right thing.

And Secretary Glickman worked very hard to preserve all the functions in this area that are going on, except the logging. And I believe there will be a net gain economically here, because we are protecting these trees for life, forever. That's what I believe, and I just think it's the right thing to do. I've always believed this. I did this sort of thing when I was Governor. It's not something that I woke up last year and decided it would be a nice thing to do. I believe that.

And I think—we don't have to criticize each other's motives. They can disagree with my decision, but I think I did the right thing, and I think the future will prove us out right.

Elian Gonzalez

Q. Mr. President, what did you tell Janet Reno about the Gonzalez case?

The President. Well, we just had a conversation about where it is. We reviewed where the legal case was and what her plans were. I just told her that I strongly supported her efforts and that we clearly had to uphold the rule of law.

Q. Do you want to see this brought to a swift end?

The President. Well, we have to let the court cases be decided. But I think the main thing is—I hope that all the people there who say they came to the United States because we have freedom and the rule of law will observe the rule of law. When this thing fi-

nally plays out, in the end, the law has to be obeyed. And that's basically what we talked about.

We talked a little about the details and—she was the prosecutor there for 12 years, so she knows it very well. And she's down there working hard on it, and I think she'll handle it in as sensitive but firm a way as possible. That's basically what we talked about, just what's likely to happen over the next couple of days.

But the main thing—my message is simple: She has to deal with the day-to-day details, but the thing that we've got to do is to make sure that our laws are upheld and enforced. And in the end, I'm quite confident they will be.

NOTE: The exchange began at approximately 9:40 a.m. on the Trail of 100 Giants. A tape was not available for verification of the content of this exchange.

The President's Radio Address

April 15, 2000

Good morning. As we prepare next week to mark the one-year anniversary of the tragedy at Columbine High School, our thoughts turn to the safety of our communities, schools, and children. All of us—parents, schools, communities, and government—share responsibility to keep our children safe. We've all got to do our part. This morning I want to talk about three steps our administration is taking to support school and community efforts to prevent youth violence.

We know the best approach to the problem of youth violence is a comprehensive one. That means students and parents, teachers and police officers, judges, counselors, and religious leaders all working together. That's why we created the Safe Schools Healthy Students initiative, to find and fund the best local ideas for preventing youth violence. Today I am announcing \$40 million in new grants for 23 school districts that have come up with innovative and successful strategies to reach out to troubled young people. These districts are bringing school nurses and counselors together to respond to warning signs like depression or bullying. They're improving classroom security and expanding

after-school and mentoring programs. From little Arkansas towns to big California cities, they're making a difference in the lives of our children and our communities.

Second, I'm announcing new grants under our COPS in Schools initiative, providing more than \$60 million for police officers to work in schools in more than 220 communities. The vast majority of our schools are safe places for kids to learn. But any violent incident is one too many. This initiative helps to hire and train school resource officers to be a real part of children's daily lives—using the community policing strategies that have made neighborhoods safer all over America. Already it has placed 2,200 officers in more than 1,000 communities across our Nation, where they are heightening school safety as well as coaching sports and acting as mentors and mediators for kids in need.

Third, I'm announcing a new initiative to support counseling programs for elementary schools. The Department of Education has set aside \$20 million to fund local grant proposals, because we have seen all too clearly that even our youngest children sometimes need our help. When I was Governor of Arkansas, Hillary and I helped our State to become the first State in America to mandate counselors for schools, elementary schools. We want to help all of our elementary schools who are willing to have the same sort of support.

Here at the White House, I've created a Council on Youth Violence to coordinate the work of the Federal agencies. We know the key to all of our success, however, is leadership in the community, at the grassroots. Last year I challenged Americans from community organizations, the media, business, and all walks of life to mobilize against youth violence. The result was the National Campaign Against Youth Violence, working to bring together a cross-section of citizens to keep our children safe.

Just this week in Memphis the National Campaign kicked off a nationwide initiative to put the resources of business in the service of safer, stronger communities. They'll visit 15 cities and sponsor town meetings and media events, mobilize young people, school officials, business and religious leaders. And in every city, the National Campaign will re-

mind each of us of our responsibility to do all we can to keep America's children safer.

Those of us who are parents have perhaps the greatest responsibility. We need to talk about safety and security in every house in America—beginning in the White House. That's why Hillary and I are sponsoring a White House Conference on Teenagers next month. We'll invite parents and teens, experts and educators to talk through the challenges of raising responsible children and the opportunities we all have to help our young people make the most of their lives.

The great American author and champion of human rights, Pearl Buck, once said, "If our American way of life fails the child, it fails us all." In our national struggle against youth violence, we must not fail our children. Our future depends on it.

Thanks for listening.

NOTE: The address was recorded at 5:20 p.m. on April 14 in the Rayburn Room at the Atlanta Airport Hilton and Towers in Atlanta, GA, for broadcast at 10:06 a.m. on April 15. The transcript was made available by the Office of the Press Secretary on April 14 but was embargoed for release until the broadcast.

Remarks at a Democratic National Committee Dinner in Beverly Hills, California

April 15, 2000

The President. Thank you very much. Well, first of all, let me say that this is an easier speech for me to give than the one the Vice President just gave, because I'm not running for anything. [Laughter] So I was thinking, well, what should I say? And I asked Al, I said, "Is there anything special you want me to say?" He said, "Nothing special; just get up there and say, 'Washington, Jefferson, Lincoln, Roosevelt, Gore.'" [Laughter]

I actually—and I will proceed to tell you why I actually think that's not an unrealistic litany there.

Let me also say that the—

The Vice President. Note the amendment that I came back to you.

The President. He said, "Oh yeah, put Clinton in there somewhere." [Laughter] Actually, you know, I've gotten so gray, I tried

to get Jay Leno to come in and give the speech tonight, but he turned me down. [Laughter]

I wanted to say to you that—I really, our friends over here in the media, they do a good job of covering this Presidential campaign. But they are obsessively interested to find even the slightest difference of opinion between the Vice President and me. And I discovered another one just tonight, when he was up here bragging on “American Beauty.” Now, I loved “American Beauty.” I love Kevin Spacey. I actually liked “Howard the Duck.” [Laughter] And I just, you know, in the spirit of full disclosure, I thought I ought to make it. [Laughter]

I want to thank David and Steven and Jeffery and Marilyn, Andy, and all the DreamWorks folks and all of you who are here tonight. I talked to Hillary right before I came in here, and she said to tell you all hello. And many of you have helped her, and I thank you, those of you who have done that, for doing so.

I want to thank you for helping me and Al and Tipper before, and in this election. And I want to be brief, because I know you want to hear Sarah sing, and I do, too. But there are a couple of things that I can say that I think are meaningful.

It seems impossible to me that it’s just 2 weeks away from—or 6 weeks away, excuse me—from 8 years ago, from June 2d, 1992, when I won the primary in California, and knew I would be the Democratic nominee. And then it’s 12 weeks away from the time when Al and Tipper and Hillary and I were in New York, 8 years ago, and we started this long odyssey together, got on a bus and started one of our bus tours.

Today I got up at 5:15 and went into the Sequoia National Forest to make the Grand Sequoia National Monument, to protect the remaining 34 groves of sequoia trees for all time to come. Now, that sort of thing I got to do today because Al’s running, and I have more time to do those things. [Laughter] But it’s the sort of thing we have done.

We have now set aside more land under national monuments, the Clinton/Gore administration has, than anyone. I just loved it. So I want to say, first of all, thank you for giving us the opportunity to serve, to

make a difference. Because if it hadn’t been for our friends in California, and particularly for a lot of people in this room, I am not sure we could have done it.

I thank you for the support you are giving to the Vice President and Tipper tonight and for our party. I’m very grateful for all the leaders, present and past, of the National Democratic Party who are here. And I just want you to think about three or four things real briefly.

First of all, when Al and Tipper and Hillary and I moved to Washington to the White House, to the Vice President’s residence, we really did have a different idea about the way the country ought to work. We had a vision of an America in which every responsible citizen had opportunity without regard to their income or background, in which every law-abiding citizen was part of one American community in a 21st century world growing closer together, not further apart, where America was the central force for peace and freedom and prosperity. That’s what we believed we had to do.

And to get there, we thought we needed a unifying and forward-looking set of initiatives. Now, Al talked about that. The record speaks for itself. What I want to say to you is—notwithstanding the fact that I’m not running, and, therefore, more prone to look backward than forward—that is, after all, what you hired us to do. When you hire a President and a Vice President, you hire them to win for America.

And America is always about tomorrow. And I want you to know that even though I am not on the ballot, in many ways the election of 2000 is more important than the elections of 1992 and 1996. Why do I say that? Because we have worked so hard to turn this country around and get it going in the right direction. And we are now at a point where as a people we could literally make the future of our dreams for our children—the stuff that the Vice President was talking about.

We could finally prove forever we could grow the economy and make the environment better. We could have universal pre-school, universal access to college, and 21st century schools in between. We could really help people to balance work and family in

ways that are not possible today. We could do more than we could possibly imagine today to make globalization and high technology work for ordinary people, not just the people that are paying to be here tonight but the people that served our meal as well.

And it all turns on this election. And the truth is, this election ought not to be close. And the only reason it is, is that elections are about more than records, qualifications, and issues, and because people sometimes lose their concentration when times are good.

I like the way things are going in this country now, but I'm telling you, things could be a lot better. Things could be a lot better, but only if we build on the platform that we're standing on right now. That's the first thing I ought to say. In the 2000 election, if you like the fact that the country's been turned around, you have to believe that the 2000 election is just as important, if not more important, than the two that preceded it.

The second thing I want to say is—the Vice President can't say all the things he ought to say about himself. But in the entire history of the United States, no one who has ever served in that position has had remotely as much positive impact on America, as Vice President, as Al Gore has. Not even close.

And I was thinking about—he talked about all the hard decisions. I can still remember every conversation we ever had at our weekly lunch where he would say, "You know, I don't know how you're going to make these decisions, but I'm quite sure that decision-making involves some sort of mental and emotional muscle. It's just like working out. And the more hard decisions you make, the easier they'll get. So you've just got to jump off the board, decide what's right and do it."

And when we made the decision to take on the budget deficit and we knew we could risk political destruction for it—because everybody in the other party opposed us—he was right there early. We made the decision to take on the gun lobby in a systematic way for the first time in history, to take on the tobacco lobby, to take on the unpopular issues of Haiti, Bosnia, and Kosovo. He was there, always there, always early.

Yesterday the Russian Duma ratified START II, the nuclear arms reduction treaty,

which will now enable us both to dramatically reduce our nuclear arsenals, in no small measure because he has managed a major part of our relations with Russia for 8 years now. And we just recently saw the announcement coming out of Detroit that we're going to have cars before you know it making 70 or 80 miles a gallon, running on dual-fuel cells. He has managed our partnership for new generation vehicles for almost 7 years now.

We have the smallest Federal Government in 40 years because he ran our reinventing Government program. I'm going to have this conference on the digital divide, starting in East Palo Alto, Monday. When we became President and Vice President, only about 3 percent of our classrooms were connected to the Internet. Today, over two-thirds are, thanks to the fact that he has led our effort to connect the schools and to give rates that the schools could afford, even the poorer schools.

So we are friends, and I am biased. But what I just gave you are not my opinions but facts. So, number one, it's an important election. Number two, I'm worried because people sometimes lose their concentration when times are good. Number three, he is the most qualified person in my lifetime to seek this job, I believe.

And the final thing I want to tell you is this: There are big differences. You know what they are. But if someone were to ask me to go back over the last 8 years and to look ahead to the next 8 years and say, "Well, what is the most important thing of all?" I would say, the most important thing of all is for us to keep striving to be one America. That's why I have worked so hard to try to help end the racial and religious and ethnic and tribal wars of the world, that the United States has tried to be a force for peace all over the world. That is why we have worked so hard for the hate crimes bill, the "Employment Non-Discrimination Act," an end to racism, equal pay for women, all those things—because the American people are really smart. And if they can be free of the demons that bedevil people all over the world, we are going to do just fine.

I was in Atlanta the other night to celebrate John Lewis—Congressman John

Lewis' sixtieth birthday. We were reliving the 35th anniversary of the march at Selma. And I was talking about John and how the most important thing that he did was not just to win the passage of the civil rights laws but to lead a movement to forgive everybody that had oppressed him, and in so doing, to liberate us.

You know, we are all—all of us—are guilty from time to time of defining our importance in life with some negative reference to somebody else—"I had a bad day, but at least I'm not them. On my worst day, I would never do that and be like them." Not a person hasn't done that. But at least we've never made a political program of it in our party, and I'm proud of that. And I'm proud of being a Democrat.

So you've got the best qualified person. You heard him go through the issues, and you agree with him on the issues. We've got great people running for the House and Senate, one of whom I have a particular interest in. [*Laughter*] But you have to believe in the larger issue. You've got the chance to build the future of your dreams for your children and your grandchildren, because of the conditions that exist in this country today. Therefore, this election is as important, maybe more important than the two that came before it.

And I'll leave you with this story. Al talked about it a little in his remarks. When we celebrated, in February, the longest economic expansion in American history, we got the economic team in. Everybody is patting themselves on the back, you know, and we were all feeling like we were smarter than we probably are. And I said, "Well, when was the last longest economic expansion in history?" You know when it was? Nineteen sixty-one to 1969, when we were young people.

I graduated from high school in 1964. President Kennedy had been killed. The country united behind Lyndon Johnson. Inflation was low; unemployment was low; growth was high; productivity was booming. Optimism was rampant. Lyndon Johnson was clearly going to be reelected. And even though there was a serious civil rights challenge, we—basically, most people I knew felt it would be solved in the Congress and the

courts with peaceful demonstrations. Even though we were sort of involved in Vietnam, no one I knew at that time thought it would tear the country to shreds. And everybody was just pretty casual about where we were, and we just took our prosperity for granted, and we thought we could get rid of poverty and everything else without a great deal of effort and concentration.

Four years later I graduated from college in Washington, DC, 2 days after Robert Kennedy was murdered, 2 months after Martin Luther King was murdered, 9 weeks after Lyndon Johnson said he couldn't run for President again because the country was ripped right down the middle over Vietnam. We had riots in the streets, and within just a few months after the 1968 election, the longest economic expansion in history was history.

I say that not to be a downer, because I am probably the most optimistic person, congenitally, maybe even naively, and more optimistic than I was the day I became President. But I say that to remind you. We dare not break our concentration or relax our commitment just because times are good.

And forget about being President, I say this to you as a citizen. I have waited for 35 years for my country once again to be in the position it was in when I was young, to build the future of our dreams for our children.

That's what this election is about. That's why he should be President. You will never get a chance in your lifetime to vote for someone as well qualified again. I certainly wasn't when I ran. You will never get a chance in your lifetime to ratify a direction and to accelerate the pace of change that is clearly working.

If you really think about it, you are not ever going to have any clearer choices. But when you think it doesn't matter, when you get tired, when you wish somebody wouldn't call you again between now and November, you remember the story I told you about the last longest economic expansion in American history, and take a deep breath and bear down, because the best is still ahead of us.

Thank you, and God bless you.

NOTE: The President spoke at approximately 10:15 p.m. on the terrace at Historic Greystone Mansion. In his remarks, he referred to “Tonight Show” host Jay Leno; actor Kevin Spacey; founders Steven Spielberg, Jeffrey Katzenberg, and David Geffen, and Chief of Corporate Affairs Andy Spahn, DreamWorks SKG Studios; Mr. Katzenberg’s wife, Marilyn; and musician Sarah McLachlan. The transcript released by the Office of the Press Secretary also included the remarks of Vice President Gore.

Remarks and a Question-and-Answer Session With the Community in East Palo Alto, California

April 17, 2000

The President. Good morning. I want to thank Mayor Wilson for making us welcome today. And thank you, Magda Escobar, for all you have done. I also want to recognize some other people who are here with us today. Reverend Jackson, thank you for coming. Carly Fiorina, the president of Hewlett-Packard; and Robert Knowling, the president of Covad, thank you for being here. Rebecca Lobo, thank you for being here. We’re glad to see you.

I’d like to also acknowledge the presence in the audience of Secretary of Housing and Urban Development Andrew Cuomo; the Chairman of the Federal Communications Commission, Bill Kennard; and many Members of Congress—Representative Zoe Lofgren, Representative John Conyers, Representative Bill Jefferson, Representative Barbara Lee, Representative Silvestre Reyes, Representative Stephanie Tubbs Jones, Representative Anna Eshoo—I think that’s all the Members of Congress who are here.

I’d like to thank Gene Sperling and Maria Echaveste. And I want to recognize especially the man who helped us avoid the Y2K problem, a distinguished Republican Senator from Utah, Bob Bennett. Thank you for coming, Senator Bennett. We’re glad to see you.

I’d also like to thank all the civil rights leaders who are here, the high-tech CEO’s, the foundation directors. And I’d like to thank Julian Lacey, who is here, for helping us kick off our national call to action for digital opportunity. I know that all of you know Julian. Thank you.

I want to thank AOL for webcasting today’s event live. And I’d like to say a special word of appreciation to one person who is not here who helped us to develop our entire approach to closing the digital divide, Vice President Al Gore. I thank him as well.

Now, I will be brief because I want to get on to the questions. But I want to tell you why we’re here. This is a very fortunate time for our country. We have the strongest economy in history. We have the lowest African-American and Hispanic unemployment rates our country has ever recorded and the lowest female unemployment rate in 40 years. But we all know there are people and places that have not fully participated in this new economy.

I have been to a lot of those places on my digital divide tour—I mean, my new markets tours—because I see these places as places of opportunity, places of new markets. If we can create new employees, new businesses, new jobs, new opportunities, we can keep the American economy going. This is one of those fortunate times when, by doing the thing that is morally right, we actually help to keep America’s economic expansion churning forward. It’s going to take the efforts of government, business, and the community sector to succeed.

This is our third new markets tour. When I leave you, I’m going to northern New Mexico, to the Ship Rock Navajo Reservation. And tomorrow I’ll be in Chicago, meeting with representatives of every aspect of the high-tech industry in America. I wanted to begin here in East Palo Alto, because even here in Silicon Valley there are many people who could be left behind, and because you’re doing so much to make sure you’re not left behind. And we ought to be giving a helping hand.

I don’t think there is a better place in America to show what can be done to reach out to our children who are at risk of falling behind. We can see that here at Plugged In, at the Silicon Valley Project, at the new Cisco Sun Academy, where graduates are virtually assured of good jobs that pay up to \$70,000 a year. In a few minutes, I will announce some other things that corporate leaders here today are prepared to do to help this city on the move, move even faster.

Let me just briefly ask you to remember the history of this community. A hundred and fifty years ago East Palo Alto got its start as a community called Ravenswood. Ravenswood was a good candidate to become the last stop on the transcontinental railway, something that was very important in the industrial age. Unfortunately, plans changed, the railroad bypassed Ravenswood altogether, and it was a decision that had repercussions for the people who lived in this community for a century or more.

Today, we're in another time of fundamental economic transformation, but we can do it very differently because, unlike the railroads of the industrial age, the trade routes of the information age can run through every city, every town, every community. And in fact, the more communities they run through, the better it works.

No one has to be bypassed this time around. The choice is in our hands. We can use new technology to extend opportunity to more Americans than ever before; we can truly move more people out of poverty more rapidly than ever before; or we can allow access to new technology to heighten economic inequality and sharpen social division.

Again I say, the choice is ours. But I want to reiterate a point I made earlier. The truth is that doing the right thing will accelerate the strength of this powerful economic engine. Every economist knows that new technologies will continue to drive rapid economic growth only if they continue to spread to all sectors of our economy.

I have made closing this digital divide a big priority. It is a big priority in our budget and a big priority for trying to enlist the energies of our fellow citizens. That's why I issued a national call to action, to enlist the support of businesses, State and local governments, community groups, foundations, schools, and volunteers. Already, more than 400 organizations have signed on to our call.

To reach these broad national goals, all of us are going to have to do our part. In addition to our \$2.25 billion E-rate initiative, which allows us to hook up every school and library in the country to the Internet, including those who can't afford it on their own—and our new \$450 million Technology Literacy Challenge, which helps to provide to

poor areas the computers, the software, the teacher training, and the Internet access that's so important. I'm asking Congress for \$100 million for community technology centers like Plugged In, \$150 million to help train all new teachers to use the technology and the Internet in the classroom, and \$2 billion in new tax incentives for computer donations and contributions to our schools, our libraries, and community technology centers.

But the important announcement is the one I want to make today. Corporations in this area have committed over \$100 million to help you do what you do best. Gateway will provide technology training to 75,000 teachers, including every single teacher here in East Palo Alto. Novell will donate \$20 million in software for nonprofit organizations devoted to helping underserved Hispanic organizations. Hewlett-Packard will invest \$15 million in a new digital village initiative to help three underserved communities, starting here in East Palo Alto.

Qualcomm is giving back to the city where it's based, San Diego, with a \$25 million commitment, including \$7 million—this is important—to improve math and science education among all of our young people. PowerUP, a partnership of AOL, Gateway, and several other companies that brings technology to young people in schools and community centers, is going to expand from 19 to 250 sites nationwide. AmeriCorps, a strong partner of PowerUP, will assign 400 of our young volunteers to work at these sites. AOL is going to provide 100,000 accounts for use at these sites, a commitment worth \$26 million every year.

Applied Materials has pledged a million dollars for projects such as a new high-tech job training center for the people of East Palo Alto. And they are going to be in partnership with the city and with Reverend Jackson's Rainbow/PUSH Coalition, which has an office right around the corner here. I promised Jesse I would promote his job site, too, you see, around the corner.

AT&T is committing \$1.2 million to support the Academy of Information Technology, which is dedicated to helping high school students prepare for high-paying jobs in the high-tech industry. Cisco will invest \$1.4 million to expand its Cisco Network

Academy program to 10 more underserved communities. People PC has agreed to donate 300 new multimedia computers to the East Palo Alto Schools.

I want to thank all these corporations and all their leaders for their new commitments, and I want to thank Covad for leading an effort to increase minority participation in the high-tech industry. We are nowhere near where we ought to be on that.

Now, the commitments of governments and corporations are only part of the equation. The rest requires motivation, and that's what I want us all to focus on for the rest of our time here. Frankly, all the computers and software and Internet connections in the world won't do much good if young people don't understand that access to new technology means access to new learning opportunities, new job opportunities, new entrepreneurial opportunities, access to the new economy.

That's why I am very pleased that the Kaiser Family Foundation is going to create a major public service campaign to inspire young people to get on computers and get on-line. The ads will air on NBC, ABC, CBS, Fox, BET, Univision, MTV, the Cartoon Network, and other major channels. They will feature Magic Johnson and Rebecca Lobo, who will highlight new technologies and the fact that they're not only fun, they can open a lot of doors in life. BET.com will also air their own PSA's, encouraging African-Americans to use the Internet and participate. Let's give them all a hand. That's great. *[Applause]*

Now, let me just say this. I want to thank the people at Plugged In again, Magda and all the others. Places like this can change lives forever. You come in, learn how to design webpages or set up networks or just how to use the Internet as a tool for discovery. That gives you the power to control your future.

I want to show you something. If you haven't done this, I want to urge you all to take a look at the classifieds from yesterday's San Jose Mercury News. There are 10,000 technology-related jobs advertised in this paper. If they could be held by every unemployed or underemployed person in East Palo Alto, this would be a better country today. So whether it's finding a high-tech job or serving as a teacher or just being a more

effective parent, every young person needs to know how to use this technology. It will serve you well, no matter what you do.

Now I'd like to begin our discussion by asking Rebecca Lobo a question that I hope will help us to understand what's involved here in getting young people to actually commit themselves to becoming technologically literate.

A lot of people, Rebecca, across the country look up to you because you're tall. *[Laughter]* And they also look up to you because you're a great basketball player, a great human being, and therefore, a great role model. They see the life you have; they'd like to have a career in professional sports. But a lot of kids have to find their stardom somewhere else. There are only so many people who can make it in sports, but everybody can make it in life. So I'd like to know how you would speak to children to try to persuade them how to become technologically literate, why they should master computers and the Internet. What would your message be?

[Rebecca Lobo, a player for the Women's National Basketball Association New York Liberty, said that children should follow their dreams and that access to the Internet offers a way to find paths to success.]

The President. I'd like to—is it on? I'm still technologically challenged, right? *[Laughter]* I want to ask Reverend Jackson a question. You've been involved in the civil rights revolution all your life. We were just in Selma together. When Dr. King died, he was moving the civil rights revolution to a new stage, the stage of economic opportunity. And you have spent most of the last 30-plus years trying to extend that opportunity to people who have been left out and left behind. What do you think this new technology means to your prospects of succeeding at the work of the last 30 years?

[Civil rights leader Rev. Jesse Jackson recalled young America came alive in the civil rights movement of the fifties and sixties to achieve social change. He announced an upcoming Rainbow/PUSH Coalition conference in East Palo Alto to energize youth, parents, and churches to take advantage of technology and to close the digital divide.]

The President. Thank you.

I would like to ask a question of Carly Fiorina. One of the things that bothers me about being President is that I can—I'm a fairly high-energy person, so I can go to a place like East Palo Alto, and we can get everybody together, and we can get all these commitments, and people can follow through on their commitments. But I'm always worried that somehow there will be a gap between this moment and when people's lives really change. And I would like to know what you think it will really take for the information revolution to permeate this community and others like it, to the extent that we really will be able to guarantee equal opportunity to all these kids if they master the fundamentals of the information revolution.

[Carly Fiorina stated that there is a constant war for talent in the high-tech industry and the need for skilled personnel would continue because it is a growth industry with no end in sight; she said that information technology and the Internet could be the great equalizer and erase barriers of time, distance, and prejudice; however, without those tools, skills, and access, the digital divide would become greater.]

The President. Thank you. Let me just say—I just want to follow up on something. I want you to think about this. We're all sitting here talking about this, with 10,000 job vacancies being advertised in the paper yesterday in this area. If we don't do this now, when are we ever going to get around to it? Do you think we'd be having this meeting if the unemployment rate were 10 percent in America, or 10 percent in California? This is the time we've got to do this.

We're back in Washington today debating legislation about how much—not whether but how much—we have to raise the cap on visas to bring in people from other countries who are trained in these skills. And I'm pro-immigration. I'm all for this. We've got to do it. We've got to keep these industries going. We've got to do the right thing. But I'm also trying to make sure when we do it, we get more investments to train people here to do those jobs, because you can do it.

And I just want to say something to the local folks here and to the kids who are here.

You've got to decide whether you believe intelligence is equally distributed in this world—I do; whether you believe ability is equally distributed—I do. I mean, not for everything; I couldn't play basketball like Rebecca. But everybody can do something, and everybody can learn this.

I just got back from India, a country with a per capita income of \$450 a year. And I was in a poor village where I saw women who were almost illiterate, had never even been given the privilege of going to school, getting on computers, calling up their government's webpage, getting information about how to take care of their newborn babies in remote villages because they had a computer with a good printer to take the software, give it to them, they could take it home.

This can change the way the world works, and it can save you and your children from having to wait 30 years to move into the mainstream. It can be done in a matter of months or a year. But you have to believe it, and you have to take advantage of it. And if we can't do it where there's 10,000 job vacancies in the paper, we will never get around to doing it.

I would like to ask Bob Knowling to talk a little bit about—to be more specific here. What kind of job opportunities are available for minorities, for example, who may come from poor homes or poor neighborhoods or poor communities, if they get the skills and the training they need? And what do you think is the most important thing they could do and we could do to bridge this gap?

[Robert E. Knowling, Jr., noted that the industry offered a wide variety of job opportunities, but women and people of color often got through the educational process and then did not get the jobs. He said high-tech businesses should stop merely paying lip service to diversity in hiring, and he hoped the next time the President visits, there will be only a few job vacancies remaining.]

The President. Good deal.

President's Use of Internet

[Magda A. Escobar, executive director, Plugged In Enterprises, began the question-and-answer session with the community members in the audience, and a 9-year-old

asked how the President used the computer and the Internet.]

The President. Mostly—let me tell you what, you know what I did? At Christmas-time I actually ordered Christmas presents with the computer. I confess, I don't use it much for E-mail, but that's for very personal reasons. When I want to talk to my daughter, for example, I get on the phone and call her. If you work for the Government, you don't use E-mail very much unless you want it all in the newspaper. *[Laughter]*

So I mostly use—and the other thing I do is I try to find new sites. When I hear about something new, I try to get onto it. For example, when I learned that now up to 30,000 people were making a living off eBay—I'm always reluctant to give one company a free commercial here but—and that a lot of them had once been on welfare, I wanted to look at it and figure out, how were these people making a living?

So for me, I'm almost like you, I'm still trying to learn about all this, and I'm so interested in what its possibilities are. But the only thing I get personal benefit out of is shopping, because it's hard for me to move around very much. *[Laughter]*

Let me say, I also wanted to thank—I forgot to say something—I wanted to thank the Costano Elementary Choir. They sang before I got here. So let's give them a big hand. Thank you very much.

High-Tech Industry and Community Development

[Ms. Escobar noted that America Online was broadcasting the event live on the Internet and questions were being submitted from 17 locations across the country. She read a question about what students could do to attract high-tech industries to their area.]

The President. You should answer that.

[Ms. Fiorina answered that high-tech industries go where there is skilled labor, where the education system will continue to develop skilled labor, where the tax system is encouraging, and where transportation systems enable growth.]

Reverend Jesse Jackson. Mr. President?

The President. Go ahead, Jesse. Let me just answer that question real quick, though, because this is important. People ask me this all the time.

The truth is, everything Carly said is right. Therefore, if you really want high-tech jobs in your area and you don't have them, you need to examine your school system and then get someone who understands all these factors that she just mentioned, to come into your community and help you develop a specific plan for all the changes you need to make to get it done. This is not something that can be done in a speech; I used to do this for a living when I was a Governor. This is about having a specific plan—what are you going to do; what's the list of people you're going to contact; who's going to do the work?

So if the students who asked me this question are really interested in it, your community needs a plan. And then somebody needs to be charged with carrying it out, and then somebody else needs to be checking on them to make sure they're doing it. It is like every other endeavor: you've got to have a plan, and then you've got to execute it.

[Reverend Jackson reiterated that many pockets in the Nation are fundamentally disconnected and need a combination of structural universal access, motivation, and access to capital for entrepreneurship.]

The President. I agree with that.

Any other questions in the audience here? Go ahead.

Future Technology

[A 9-year-old girl asked what technology would be in the future.]

The President. Well, I certainly can't answer that. Who wants to answer that? Bob, you want to answer that question?

[Mr. Knowling suggested that smart cards and smart chips would replace money and devices for Internet access would become more mobile. He said that globalization would increase, and the Internet revolution would make the Industrial Revolution pale in comparison. Ms. Fiorina added that young people would help figure out the future, and technology would become personalized and nonintrusive.]

The President. I also think what you will see is that—two things—I think all communications, information, and entertainment systems will merge. So people will be carrying around things that are telephones or faxes or televisions, you know, calling up movies, everything else in one little thing they can carry around with them. I think you will have that.

And the other thing I think will happen is there will be a radical alteration in the relationship of energy to work, which will enable us to dramatically improve the protection of the global environment and generate a whole different kind of jobs than we've ever had before. I think those are the two things that will happen over the next 20 years.

There was one other—I promised the lady over here—that young woman, yes, I promised her.

High-Tech Industry Internships

[The next questioner asked if the President would help the community's youth receive internships in Silicon Valley. Ms. Fiorina interjected that Hewlett-Packard's internship program had been successful for both the company and interns.]

The President. How old are the interns? When do you start?

Ms. Fiorina. Most of them start at the end of their high school years and in their college years. I don't think we have interns much younger than 15 or 16.

The President. Let me just say this. Maybe one of the things that the mayor could do is to sort of scout the interest in the high schools of the community and then talk to some of the companies about it. I'll bet you could arrange for some intern or intern-like programs for kids in their high school years so at least they could be exposed to these companies and see what it is they need to do. And we could come out with something good here.

Internet Access in Low Income Areas

[Ms. Escobar read a final question from the Internet about plans to help children from poor neighborhoods get access to the Internet.]

The President. Well, right now, what we are trying to do is to make sure all the schools are wired. And when we started, only about 3 percent of our schools were, 1993. Now, we're up to 95 percent of the schools in the country have at least one Internet connection, including 90 percent of the schools in low income areas. Surprisingly enough, some of our schools, believe it or not, can't be wired because they are so dilapidated, which is why I've been trying to get a school construction initiative passed through Congress.

This may be hard for you to believe out here, but there are schools in New York City that are still heated by coal-fired furnaces. In Philadelphia, the average school building is 65 years old. And there are literally some of our poorest schools in our poor neighborhoods that we are physically unable to wire. But apart from them, by the end of this year, we should be at 100 percent of the schools.

Then what I think we need to do is to look at some of the things that have been done, for example, by Lucent and others in Union City, New Jersey, where they are trying to put more computers and Internet connections into the homes of first generation immigrants so that they can—the parents can E-mail the principals and the teachers and learn and actually having—my goal is—it can't be done while I'm still President, but I'm going to keep working on it—my goal is to have the penetration of computers and Internet access in this country to equal the penetration of telephone usage. That's what our goal ought to be. We ought to not quit until we get there.

Ms. Escobar. Mr. President, we actually have time for one last question from the audience.

Audience member. Hello.

The President. No, let this lady go, and then I'll take yours. No, this lady first and then you. Okay, go ahead.

Audience member. Hi, Mr. President. My parents both voted for you. [Laughter]

The President. Thank you very much.

Diversity in Science and Engineering

[The audience member asked about programs to promote more access to science and engineering for African-American females.]

The President. Well, I mentioned one of them in my announcement, but I think that beyond what we have talked about here, I think generally there needs to be a greater emphasis among young female students and among minority students on science, engineering, mathematics education. And we actually have some initiatives to invest in that, to do more outreach, do more recruitment, get more people involved in these programs, to encourage more people to go on to college to major in these programs in the 21st century science and technology initiative that the Congress has. And I think it's about a \$3 billion initiative. I think it has very broad bipartisan support, and I expect it to pass.

But I think we need to continue to just work on recruitment and then make sure that the kids that are interested in it take the courses in high school they need to take to get into the college majors. But I hope—that's one of the things that I was talking about. You know, we don't have enough women or minorities in a lot of these technology fields. But there are a lot of other fields related to science and engineering where we need more. I was talking to a young woman yesterday, who is a classmate of my daughter's at Stanford, about that, in the engineering area.

I think a lot of it, too, is making people believe they can do it. You know, in that sense, there is a parallel to the—you know, a few years ago, we had a lot of talented women basketball players, but they didn't imagine that they could have a pro league that could work. But it does now, and so Rebecca has got a whole different life than she would have had if she had been an all-American college basketball player 20 years ago. She wouldn't have had the life she now has. And that's—someone imagined it, and then they went around putting it together.

And I think it's even easier if we could just get more talent into the science and technology and engineering fields. And I think the main thing is recruitment and then making sure the young women and other people who have been left out actually do the preparatory work they need to get into the majors. I think the companies will recruit them coming out of college if they get there in the first place.

Now, I promised this lady she could ask her question.

President's Visit

[In lieu of a question, the audience member welcomed the President and other dignitaries on behalf of the East Palo Alto community.]

Ms. Escobar. We have received hundreds of E-mails from students across the country. And once the President gets back, I understand he will be responding to them.

The President. Yes, we want to respond to all the E-mails.

Ms. Escobar. Great, wonderful!

The President. Anything else? Let me say to all of you—I'd like to ask you to give a big hand to Senator Bennett and all the Members of the House of Representatives that are here. I thank them for coming. *[Applause]* One of the things I've noticed after 7 years of being President is that the President gets to give the speeches, but if the Congress doesn't appropriate the money, it's just a speech. So I think their interest in being here is very encouraging, indeed.

I want to thank all the chief executive officers of all these companies who are here, because much of the work that will be done and much of the commitment that has been made today comes from them. So give them a hand as well. *[Applause]*

And let me urge you again not to get discouraged, to work on this, and to remember that as big as the challenges seem, there are other people for whom the challenges are greater. I will just give you one example. When we get to the Shiprock reservation today, we will be at a place where only 20 percent of the residents have telephones. Now, you can't be on the Internet if you don't even have a line. The last Indian reservation I visited, the unemployment rate was 73 percent.

The one thing you have here is physical proximity, and you ought to make the most of it. I'm out there trying to figure out how to help other people overcome physical distance, from Appalachia to the small towns of the Mississippi Delta to these Native American reservations. You've got the proximity. These people showed up here today for you. And now, to some extent, the community, the schools, you've got to make the

most of this. They want to be here to help you, and you can do it.

Thank you very much, and God bless you.

NOTE: The President spoke at 9:07 a.m. in the parking lot at Plugged In. In his remarks, he referred to Mayor Sharifa Wilson of East Palo Alto, CA; Julian Lacey, manager, Plugged In Enterprises; and Earvin (Magic) Johnson, former National Basketball Association player.

Remarks to the People of the Navajo Nation in Shiprock, New Mexico

April 17, 2000

Let me say *ya' at' eeh*—[*applause*]—William Jefferson Clinton *yinishye*—[*applause*]—Irish *nishle*. I am profoundly honored to be here within the four sacred mountains, especially on Navajo Nation Sovereignty Day. I want to thank young Myra Jodie. Didn't she do a wonderful job up here? [*Applause*]

Thank you, President Kelsey Begaye, for your strong leadership. Thank you, Congressman Tom Udall; the vice president, Taylor McKenzie; Chief Justice Robert Yazzie; Speaker Edward Begay; members of the Navajo Tribal Council; Shiprock Council Mayor William Lee. And we have with us today the president of the National Congress of American Indians, Sue Masten; thank you for being here.

To all the honored Governors of pueblos and tribal leaders. And I thank the people who have come with me today: the Secretary of Housing and Urban Development, Andrew Cuomo; the Interior Deputy Secretary, David Hayes; the Assistant Secretary of Agriculture, Carl Whillock; and the person most responsible for working with you, Assistant Secretary of the Interior Kevin Gover. I thank him for all he has done. Federal Communications Commission Chairman Bill Kennard and Commissioner Gloria Tristani.

And I'd like to thank the people from the White House who are here, especially Gene Sperling, who put together this digital divide tour, and Lynn Cutler, who is my liaison to Indian country all over the United States. I thank them.

I want to thank four Members of Congress who made a long trip here today to express

support for our goal: Senator Robert Bennett, who came from Utah; Representative Bill Jefferson, who came from New Orleans, Louisiana; Silvestre Reyes from El Paso, Texas; and Stephanie Tubbs Jones, who came from Cleveland, Ohio.

I want to thank my friend of more than 20 years now, your former Governor, Bruce King, and his wife, Alice, thank them for being here. Thank you. I want to thank the renowned basketball star Rebecca Lobo, who came with me today. And I thank Reverend Jesse Jackson for coming. I thank all the high-tech leaders who are here.

And there was one young man who meant to come with me today, who could not come, a man I admire very much, not only for his success, but for the way he has handled adversity, Notah Begay. And I think we ought to give him a big hand. [*Applause*]

I also want to recognize two young women who are here, because they were in the First Lady's gallery at my State of the Union Address, members of the Navajo Nation and former volunteers for AmeriCorps, Christina and Justina Jones. Thank you for being here. I am very proud of them and all the other young Dine people who have served not only the Navajo Nation but our Nation as a whole as AmeriCorps volunteers.

Let me also express my deep gratitude to the Navajo Code Talkers who provided our—[*applause*]. Thank you, gentlemen. And I want to thank Senator Jeff Bingaman for working to ensure that you receive the national honors you so richly deserve.

All Americans should know of the exploits of the young Navajo men, some as young as 15, who enlisted in the Marine Corps in World War II, helped to develop an ingenious code based on your language, and became the communications link to and from the frontlines of the Allies in the Pacific war. One of our most enduring images of freedom is that of the marines hoisting the American flag over Iwo Jima. Well, there are many American military commanders from that conflict who will tell you that the United States might never have taken Iwo Jima or won countless other battles in the Pacific if it weren't for the bravery, the sacrifice, and the unbreakability of the code of the Navajo Code Talkers.

It is fitting that we begin this day by recalling their achievements. After all, there are few people in America who better embody the power of communication. In fact, if you think about it, the system the Code Talkers used has real similarities to the beginning of the worldwide network we call the Internet. Both systems were developed for sending information quickly, securely, and reliably during times of war. Both had the power to change the course of history. But there is a cruel irony here.

For more than 50 years after the Code Talkers were able to communicate with one another, over great distances in the Pacific, it is still hard to communicate between many parts of the Navajo Nation itself. In much of America, it takes just a modest amount of money and time to get someone on the Internet. But here, an astonishing 37 percent of the households are without electricity, about 70 percent without phone service, more than half without work.

I am here because I believe the new technologies like the Internet and wireless communications can have an enormous, positive impact in the Navajo Nation. They can help you to leap-frog over some of the biggest hurdles to develop your economic and human potential. They can make great distances virtually disappear. They can be a vehicle for job growth, for education, for health care, for employment opportunities. They can be the greatest equalizers our society has ever known.

I know the Navajo Nation has already begun to see this potential, as President Begaye said. Here in Shiprock, the closest public library is more than 30 miles away. Yet, thanks to your new PowerUP partnership, children and parents now are able to browse some of the great libraries of the world simply by going to the Boys and Girls Club.

On the western side of the Navajo Nation, rural health clinics are now linked through computers to the finest medical specialists at the University of Arizona. Your new Navajo Able initiative, funded in part by the Department of Education, is providing technologies to help children with disabilities write and communicate on computers. At Dine College, even rural campuses have

state-of-the-art computer labs, where students soon will conduct real-time teleconferences with professors all around the globe. But this is just the beginning.

Almost 30 years ago, when I was a young man, still a student with no money and no prospect reasonably of becoming President, for sure—[laughter]—I first drove across New Mexico. I fell in love with the land and the people. I had my first opportunity to buy for my mother and the girlfriend who became my wife some beautiful Navajo jewelry. Now, just imagine if all the remarkable silversmiths and weavers of the Navajo Nation could sell their work not only in local markets but in national and global markets as well. Just imagine if all remote health clinics were connected electronically to major medical centers. Imagine if Dine could commute to high-tech, high-paying jobs in large cities just by getting on a computer here in Shiprock. Imagine if all your children had access to the same world of knowledge at the same instance as children in the wealthiest communities in America. The potential is staggering, and we have to seize it.

I am here today to pledge that the National Government will do its part in ways that honor your tribal sovereignty. Ever since I have been President, we have worked to try to empower the tribes of our Nation. I will never forget the day in 1994, when I had the chance to welcome leaders of more than 300 American Indian tribes to the White House, the first time this had been done since President James Monroe's administration, in 1822.

You know, when I was just a very young boy I used to go to the county public library in my hometown, in Arkansas. I can remember spending day after day reading histories of Native American tribes and biographies of famous chiefs. I remember once I read in the biography of Chief Joseph of the Nez Perce that incredible statement he made, "From this day, I will fight no more, forever." It was a noble, powerful, brave thing to do.

But as we all know, though many of your ancestors gave up fighting and gave up land and water and mineral rights in exchange for peace, security, health care, and education, the Federal Government did not live up to its end of the deal. That was wrong. And I

have worked hard to change it. There is nothing more important to me than getting this government-to-government relationship right, but getting it right in a way that will empower you to lift yourselves and your children to fulfill your potential and your dreams, not a patronizing relationship but an empowering one, not a handout but a hand up, a genuine partnership so that your children can live their dreams.

As Congressman Udall said, I did ask in the State of the Union Address for the largest budget increases in history for new and existing programs to assist tribal nations. That is why I traveled last year to the Pine Ridge Reservation in South Dakota, the home of the Lakota Sioux. That is why I made Indian country an important focus of our new markets initiative.

Let me tell you what that is. I believe the only way to keep this economy growing is to bring economic opportunity to the people and the places who have been left behind. More businesses, more jobs, more incomes means growth without inflation for the rest of America. People in New York City and Los Angeles and Seattle and Dallas and Atlanta and Miami, they all have a stake in your economic success. And I am here to bring that message to you, and through our friends in the media, to them.

I want to give Americans who have money the same incentives to invest in underdeveloped areas in America we now give them to invest in underdeveloped areas of Latin America or Asia or Africa. I want Americans to look first to people here at home who need work and education, who need technology and opportunity.

And there is no better place to begin than by bridging the digital divide. Our E-rate initiative, to provide discount rates to schools and hospitals and libraries that could not otherwise afford them, an initiative pioneered by our Vice President, Al Gore, and championed by this administration for years, has helped to equip every classroom in the consolidated school district with computers and the wiring to connect to the Internet.

My new budget provides a major new initiative to prepare Native Americans for careers in technical fields. It provides \$2 billion in tax incentives to encourage the private sec-

tor to donate computers, sponsor community technology centers available to adults as well as children, and provide technology training for workers; \$150 million to train every single new teacher on how to use this technology effectively in the classroom; and \$100 million to create 1,000 community technology centers all across the country, to serve all the people of the community—the old, the young, those in between, those with disabilities, and those without education, everyone who can benefit from tapping into this new technology.

And I want you to know that I am joined here today by private sector leaders who are part of our national call to action. Hundreds of organizations, including all 32 tribal colleges, have answered this pledge. And I want to highlight just some of the public and private commitments being made to benefit the Navajo Nation and Native Americans all across our country.

First, and very important, our Federal Communications Chairman, Bill Kennard, is proposing to expand the Lifeline program to ensure that every Native American who needs it will be able to get basic phone service for as little as \$1 a month. In this day and age, when we want every American to have access to the Internet, we must first make sure that every American has access to a phone, so there will be a line to hook into.

Second, Native American Systems, headed by Robert Rutherford, a Choctaw, is committing \$100,000 state-of-the-art satellite communications to the Red Rock Day School, to provide equipment to 30 other BIA schools in other parts of Indian country. Tachyon is providing satellite Internet access to Dine College and the Lake Valley School. Give them a hand. [*Applause*]

Compaq will provide \$500,000 to spur the TechCorps schools partnership, which uses the Internet and TechCorps volunteers to help teachers make the best use of technology in the classroom. Four Navajo Nation schools participated in the pilot of TechCorps schools. Today I'm proud to say that this new commitment will make it available to all Navajo Nation schools and all K through 12 schools nationwide for Native

Americans. Microsoft will provide \$2.75 million in software and technical support for the American Indian Tribal College, program, which will directly benefit Dine College. Andersen Consulting has committed \$100,000 to support small business in Indian country, something we need more of. We need access to capital, training, technological support. The capacity to grow small businesses in Indian country is far greater than anything we have realized to date. Healthon/WebMD will provide valuable Internet sources to the medical professionals at the Indian Health Service facility right here in Shiprock. Let's give all these groups a big hand. [Applause]

I began my remarks today by doing my best to introduce myself to you in the proper way, telling you my name and my family's clan, in your language, as best I could. Well, it's true we are from different clans. Your ancestors were here on this continent, here within the four sacred mountains, long before my ancestors even knew of the existence of this continent and this land we call America. But my friends, we are now all part of the same American family. We are all related, and it is time we acted like we were all related.

We have never had a better chance to build the right kind of relationship. We have never had a better chance to build new connections between people, between cultures, between nations. The Navajo Code Talkers gave us one of history's most stirring lessons on the power of communications. They showed us in the most concrete way that our cultural diversity in America can be our greatest strength. And that is why we must do everything in our power to allow all Dine to lend their talents and their skills to the great enterprise of building our future together.

Ahe' hee doo hagoane. Thank you, and goodbye.

NOTE: The President spoke at 5:50 p.m. at the Boys and Girls Club of Shiprock. In his remarks, he referred to Myra Jodie, student, Steamboat Navajo Nation, AZ, who introduced the President; President Kelsey A. Begaye and Vice President Taylor McKenzie of the Navajo Nation; Chief Justice Robert Yazzie, Navajo Nation Supreme Court; Speaker Edward T. Begay, Navajo Nation

Council; William Lee, chapter president, Shiprock local government; Notah Begay III, professional golfer; and Special Assistant to the President for Agriculture and Trade Carl S. Whillock, board member, Rural Telephone Bank Agency of the United States.

Message on the Observance of Passover, 2000

April 17, 2000

Warm greetings to all those celebrating Passover.

Each year, Jews across America and around the world celebrate this sacred holiday by gathering with family and friends to share a festive ritual meal and to retell the story of Passover.

As children read from the Haggadah, a new generation learns the ancient story of God's liberation of the Israelites from slavery in Egypt and of their arduous 40-year journey through the desert. By singing songs, reciting prayers, and sharing food and drink steeped in tradition and symbolism, children learn to appreciate the rich history of the Jewish people, the importance of religious freedom, and the many blessings God brings to our lives.

This year, as families gather for the seder to once again tell the story of Passover and of the Israelites' journey to the Promised Land, let us all give thanks for God's grace in our lives and for the wonderful blessings of liberty. And let us pray for a future filled with peace, hope, and opportunity for all the children of the world.

Hillary joins me in extending best wishes for a joyous Passover celebration.

Bill Clinton

Internet Video Conference in Shiprock

April 17, 2000

The President. Thank you. That was interesting. You did a good job, and I think your Navajo is better than mine. [Laughter]

Participant. I'd like to ask some questions, if I may.

The President. Please do.

Participant. Do you like working with the Internet?

The President. I do. I especially like it when I don't have to think, I can just talk to you. [Laughter] I don't even have to click the mouse. I've got it on you, though, right on your hand and microphone. So ask me a nice question. [Laughter]

Internet Access for Police Departments

Participant. Mr. President, our—[inaudible]—police department is not connected to the Internet.

The President. Your police department?

Participant. Yes. They do not have 911 services. People die because police get their information late. If they had Internet, they could communicate with other police departments better.

The President. Well, we are trying to get Internet service throughout the Navajo Nation and, indeed, throughout all of Indian country. And I will—when I go back, I'm going to see whether we can do anything to accelerate Internet access, especially for police departments. But I think we ought to have it in as many homes as possible, as well. So we have to get telephone service out to everybody. And then we need to get the Internet connections.

But the law enforcement issue is a separate issue. And I will do what I can to speed it up.

Community and Home Internet Access

Participant. Mr. President, we are very thankful for getting the Internet at our school.

The President. Could you ask the question again? I didn't hear you.

Participant. Mr. President, we are very thankful for getting the Internet at Lake Valley Navajo School. How could you make sure the students keep the Internet for future use?

The President. Future use? You mean after you leave school?

Participant. For more than just a year.

The President. Is that what you mean?

Participant. Yes.

The President. I think the most important thing is to make sure that all the students who have Internet access now will be able

to go on to college, if they wish to go on, when they finish school, and will also be able to have access to the Internet in their homes. I think making sure that we have universal telephone service and that people's homes will be able to be connected is the most important thing. The cost of the computers will continue to go down, and the technology will become less and less expensive if the infrastructure is there. So I think that, to me, is the most important thing that we can do, in the Government. And there are a lot of companies that are helping us try to make sure that you will be able to have access to the Internet.

The other thing I think we ought to do is to make sure that every community which needs it has a community center where adults, people of all ages can come in and log on and use the Internet for whatever they need. And we're trying to set up another 1,000 community computer centers around the country right now.

Participant. Okay. Thank you. [Laughter]

The President. I wish you were in the press corps. They never let me get off that light. That's great. You heard what she said, it was okay. [Laughter]

President's Interest in the Navajo Nation

Participant. Mr. President, what is it about the Navajo Nation that interests you?

The President. Oh, many things. I'm interested in the history. I'm interested in the culture. I'm very interested in the creative arts. And I'm interested in the commitment I see from your leaders and your citizens and your young people to education and to using all this modern technology to try to give Navajo people, especially Navajo young people, the chance to fulfill their abilities and live out their dreams without having to give up their culture, their language, their heritage. It's very impressive to me, and I'm very interested in it. I hope that I'm able to help you. I'm certainly going to try.

Participant. Okay. Thank you. [Laughter]

Internet Access Benefits for Schools

The President. Let me ask you a question. What do you think the most important thing

about access to the Internet is for young people? Why do you care whether you can use this technology or not?

Participant. To communicate and get more information, research projects.

The President. How many of the students who are there, not just you two but all the others who are in the room with you, raise your hand if you want to go to college. That's good.

One of the most important things about the Internet is it enables us to bring information that's available anywhere in the world to people, no matter remote where they live is. So, to me, one of the best things about this is the possibility it offers to give you a world-class education.

If you could change anything about your education and could get any improvement you wanted, what would you do? What change would you make, if you could do better?

Participant. Better schools, more equipment.

The President. Answer again, I didn't hear you.

Participant. Better schools and more equipment.

The President. More equipment and better schools. Anybody else want to answer that question?

Participant. [Inaudible]

The President. Okay, we got you in focus now. You can answer.

Participant. [Inaudible]

The President. I'm sorry, I couldn't hear. Say it one more time.

Participant. Internet access to all schools.

The President. Internet access to all schools, that's good. Right now, over 90 percent of America's schools have Internet access. And what we're trying to do is to make sure that 100 percent do, including all the Native American schools in the country. And we have gotten the cost of Internet access down low enough so that everyone can afford it now. So all schools should be able to get access within a year or so; we should be almost to 100 percent of the schools.

Would any of you like to ask a question? Yes.

President's Age

Participant. How old are you? [Laughter]

The President. I am very old. [Laughter] I'm 53. How old are you?

Participant. Seven.

The President. I wish I could trade places with you. [Laughter] It's going to be a very exciting life for you.

Any other questions? Yes?

President's Childhood

Participant. What is your favorite childhood memory?

The President. My favorite childhood memory? That's hard; I have a lot of good childhood memories. I think going back to the little town where I was born and talking to all my older relatives, listening to them tell me stories of my family's life, the way they used to live; talk to me about things in my past. I loved that. But I have lots of good memories. I had a wonderful childhood.

President's Visit

Participant. [Inaudible]—what inspired you to—[inaudible].

The President. I think, first of all, I wanted to come to the Navajo Nation, and I wanted to come someplace that was a long way away from any city, because I wanted to make the point that the Internet can bring us all close together, no matter where we live, anywhere in the world, and can make available information. You've got those encyclopedias back there; you can now get all the encyclopedias, or at least I know one or two of the major ones are completely on the Internet.

And so I wanted to come to a place in America where I knew there was a commitment to education, and here this school manifested that—where I knew that the tribal leaders were committed to giving modern opportunities to the children, and that was a long way away. I also always wanted to see Shiprock. [Laughter] I wanted to see that big rock. But I got to—I took the helicopters that we came in today very, very close in. You can't imagine how wonderful it is to see it from the helicopter. So it was a little indulgence on my part.

Computers and the Navajo Nation

Participant. Why are computers important to the Navajo Nation?

The President. Computers are important to the Navajo Nation because they will guarantee that children who go to schools that don't have a lot of money and, therefore, can't buy a lot of things that other schools can buy, that live where they live in big cities or suburbs—whatever they can buy in terms of information can be given to you directly through computers, so that for the first time in history, a child in a district—no matter how far away it is, no matter how rural it is, no matter how small it is—can have access to the same kind of information anyone else can.

Computers are important to the Navajo Nation because they can connect people who give you health care to very sophisticated medical centers. And if someone here gets a strange, rare disease, you can figure out what to do about it through the medical connections. Computers are important, as you heard from this question here, because if the law enforcement agencies are connected to computers, if someone has an emergency they might have enabled you to save lives that otherwise couldn't be saved.

Computers are important because they can enable people in the Navajo Nation to start jobs and create businesses and earn incomes in a way that wouldn't be possible. For example, look at all this lovely jewelry our heroine here has on. Now, if you could go to a local travel store—maybe I could do it while I'm here—and buy some of these, with the computer you can sell this jewelry without leaving here. You could stay right here; you could sell this beautiful jewelry in any city in America and in any foreign country in the world that is also on the Internet. So that instead of having—instead of being dependent on the customers that happen to drive by your store, which if you're up here may not be many, you can put—you can get on the Internet; you can make sure people know about your website; you can make sure people can get pictures of all these. They can see it. Then anybody anywhere in America or anywhere else in the world that's on the Internet can be your customer.

Computers are important because they can give you pen pals anyplace in the world. You can write letters and have E-mail back and forth to people in Africa or Australia or South America. You could talk to native peoples in Australia and find out how their experience is different from native peoples in the United States. It could change everything. Basically, they're important because they open the world of information to you in a way nothing else ever has.

Do you have another question?

Women's Basketball

Participant. What's your favorite WNBA team? [*Laughter*]

The President. Rebecca's team. Did you meet Rebecca? Whenever she plays, I cheer. [*Laughter*] Actually, what I'm supposed to say is that I cheer for the hometown team, because we have a team in Washington.

Now, you ask a question, and then we'll go back to the—

President's Birthday

Participant. When is your birthday?

The President. My birthday, is that what you said? My birthday is August the 19th. So this August I'll be 54, and I'll be really old. [*Laughter*]

Okay, do you have a question there, back in Lake Valley?

Next Administration's Education Policy

Participant. Yes, I do. Good afternoon, Mr. President.

The President. Good afternoon.

Participant. I'm a student at CIT, which is the Crownpoint Institute of Technology, majoring in accounting. I wanted to ask you a question about the new administration that is going to be coming in. What are you doing—

The President. You ought to be asking—go ahead.

Participant. Okay. What are you doing—the new administration—[*inaudible*]. And how is this going to affect the education of Indians here in the United States?

The President. Well, first, we have supported very strongly a tribal sovereignty relationship that would honor the principle of

tribal sovereignty, increase the U.S. Government's investment in education and health care, but would basically be committed to empowering tribal leaders and Native American people all over our country to lift themselves up, and their families, through economic and educational initiatives. And of course, if Vice President Gore is the next President, I think he will continue that policy.

But let me just say this. What I have tried to do is to put this beyond party politics. And I have with me today a Republican Senator, Senator Bennett from Utah, whom I appreciate coming here because he supports the idea of bringing the power of the Internet to tribal peoples throughout America. And what we ought to strive for is a relationship with our tribes so that you can vote in elections like all other Americans do, based on specific issues and whether you like someone better than someone else, or you agree with them on their general economic policy or their general education policy or their general foreign policy.

And the reason I've spent so much time for over 7 years now trying to get this relationship right is because I would like it if it became—my policy became America's policy, and that every leader without regard to party would follow the same path. That's what I really hope will happen, because I think that's what's best for you and what's best for us.

You can only know that as you ask people questions and listen to their answers as the campaign unfolds. I can't make that decision for you, and I shouldn't try.

Participant. Thank you, Mr. President. I would like to ask you first—[inaudible]—my great grandfather is—[inaudible].

The President. Thank you.

President's Hobbies

Participant. Mr. President, do you have any favorite hobbies?

The President. Favorite hobbies? Yes, I like to read. I like to play golf. I like to play my saxophone, and I like to go to the movies. And I like to listen to music, all kinds of music.

Participant. Okay. Thank you. [Laughter]

The President. I have so many hobbies, sometimes I have to remind myself to work. [Laughter] But usually, the people who work for me don't let me forget that I'm supposed to work. So I also do a little work every day.

Do you all have any other questions, anybody else here?

Universal Internet Access

Participant. How are you going to incorporate—[inaudible].

The President. Well, the first thing you have to do is to make sure that there's universal telephone service. You can use a computer, but you can't be on the Internet unless there are telephones. At least now. Pretty soon I think wireless technology will—but right now we have to have universal telephone service. So that's what we're working on.

We made an announcement today that we would be able to provide telephone service to every household in Indian country for no more than a dollar a month, for basic telephone service. So that's important. So then we have to make sure that the access charges for the Internet—that you can afford to do it. And that's what the so-called E-rate is about. That helps public institutions like libraries and schools. And then it's just a question of getting the equipment in and having access to the software. And that's what all these great companies are doing. There are a lot of companies that are helping. And I'm trying to get Congress to pass a bill to give big tax incentives to companies to basically make Internet access universal.

And I think what our goal ought to be, in America and Shiprock, would be to have Internet access as universal as telephone access. That's really what my objective is. Ultimately, I think that it won't be very long anyway before technology will cure all this because you'll be able to hold something in your hand that will do this, that will give you—that will be the source of the Internet and television and movies and telephone and your own files and everything else. But that's what we've got to do.

The more we can make access to this technology universal, the more we will be able to make equal educational opportunities universal. And then, from there, we will be able

to move on to making people's economic opportunity more universal. That's my goal.

Okay, do you have a question? Go ahead.

Native American Youth

Participant. In comparison to the youth of inner cities like Washington, how do you perceive the Native American youth as you visit different reservations?

The President. Well, they have their own challenges. By American standards, city standards, the unemployment rate in Washington is still fairly high, and there is a fairly high rate of poverty. But the unemployment rate is far higher on the reservations, mostly because of physical remoteness. The main difference here is physical remoteness.

And yes, you have a different culture and a native language that is different from theirs. But basically, I find young people to have more in common than you would imagine. Those kids want to learn; they want to have access to the Internet. I've been at schools in Washington, DC, that are just now being hooked up to—and where the number of computers and the number of trained teachers and the number of classrooms in the school building have doubled, and it's still nowhere near what I would like to see.

I think what I would like to see you do is to use this technology and have this kind of conversation as we're having with Lake Valley Elementary, with a school in Washington, DC. And then you could ask them questions, and they could ask you questions, and you could figure out for yourselves how you're different and how you're the same. I think you would like it a lot. And you might be surprised at what you find.

You know, when I gave the speech out here, the young lady who introduced me, who won a computer but then couldn't hook up to the Internet in her home—I don't know if you saw the speech, but she introduced me. When she was introduced, Congressman Udall introduced her and said that her favorite musical group was NSYNC. And I can tell you that you could say that about a significant percentage of the children her age in Washington, DC. So I thought, we're not all that different after all.

What were you going to say?

Internet Access Costs

Participant. I have a question. In the future, will the Navajo Reservation be able to connect to the Internet locally, rather than long-distance?

The President. Anybody here who can answer that? Somebody back there.

Federal Communications Commission Chairman William E. Kennard. What's the question?

Participant. I'd like to know, in the future, will the Navajo Reservation be able to connect to the Internet locally, rather than long-distance?

[*Chairman Kennard stated that the FCC was working with the State to redefine the borders for long-distance calls and thereby make it easier to access the Internet.*]

The President. I'm glad you asked that, because I never thought about it before. Good for you. We'll look into that.

Yes, ma'am. Go ahead.

[*A teacher asked the President how he would assist families so they could maintain computer technology at home and still have enough money for essentials.*]

The President. I have two reactions. First of all, I think the basics of life are still, obviously, the most important thing. And one of the things that we have done a lot of work on—Secretary Cuomo is here, the Secretary of Housing and Urban Development, to try to increase the stock of housing in Indian country. I think that is very important.

Now, the second thing is, obviously, to get computers in homes. Right now, we're trying to make them universal in all the schools, in all the classrooms. To get them in all the homes in the short term, we are going to have to have the help of people who will donate them. And if we can make telephone access, monthly telephone access available and affordable, then you will be able to have the computer. And then one of the things we will do is we will create several jobs repairing them for people who live here. It will create all kinds of new businesses.

The answer to the last question you raised is, I will be bitterly disappointed if 50 years from now we have to worry about how to maintain computer technology. First, the

stuff that we are putting in now will be obsolete within 5 or 6 years. And I really believe all the lines of communication and all the sources of information are going to merge into a common, user-friendly technology within the next several years, maybe the next few years, that people will then be able to afford and access.

And what I am trying to do is to create an environment here where we can get investment in so that we can start businesses, create jobs, raise incomes, so that within a matter of a few years the income and job opportunity on a place like Shiprock—in a place like Shiprock will be much more like the income and job opportunities in any other place in America.

My whole premise is that the communications revolution is shrinking the meaning, the economic meaning of distance. We know it is shrinking the educational meaning of distance because you've got the Encyclopedia Britannica on the Internet, for example. What we're trying to do is to shrink the economic meaning of distance, so that people can live here or in the Appalachian Mountains or in the remote Ozark Mountains, where I came from, or in little villages they grew up in in the Mississippi Delta, which is the poorest part of America except for the Native American reservations, and still make a living.

So my whole—you've got to understand, my whole goal is to make this irrelevant. I will be deeply disappointed if two Presidents down the road—if a President doesn't come here to celebrate the fact that everybody is in first-class housing, nobody worries about nutrition, unemployment rate is no higher than it is anyplace else in the country, and the children are having a world-class education, and we're all on an Internet connection talking to people in Russia or China or someplace else. I mean, I will be really disappointed if that doesn't happen.

The whole point of this effort is to tell people that the children of Native America are intelligent, and they deserve world-class opportunities, and the adults are able, and they deserve a chance to make a living. That's the whole point of this whole enterprise.

Thank you.

Participant. Thank you.

The President. You guys were great. Thanks.

NOTE: The conference began at 7:09 p.m. in the lobby at Dine College on the Navajo Indian Reservation. Participants included faculty, students, and guests at the college as well as Internet participants from Lake Valley School, a Bureau of Indian Affairs elementary school remotely located on the reservation about 150 miles southeast of Shiprock. In his remarks, the President referred to Rebecca Lobo, player, New York Liberty, Women's National Basketball Association.

Remarks to the COMDEX 2000 Spring Conference in Chicago, Illinois

April 18, 2000

Thank you very much. Thank you, Fred-eric Rosen, and thank you, Jason Chudnofsky. I am delighted to be here. I want to thank Director Tony Streit and the young people from Street-Level Youth Media who went on my tour with me over in the other part of the McCormick Center to see some of the new wonders of the information technology revolution. I want to thank those who have come with me here today on this last stop of this part of our new markets tour, including several Members of the United States Congress: Jan Schakowsky from Chicago; Stephanie Tubbs Jones from Cleveland; Silvestre Reyes from El Paso, Texas; and Representative Bill Jefferson from New Orleans.

I want to thank Secretary of Transportation Rodney Slater, Federal Communications Chair Bill Kennard, Reverend Jesse Jackson, Bob Johnson—the president of Black Entertainment Television—and Gene Sperling and Maria Echaveste, who operate this program for me out of the White House.

I am glad to be the first President to address this conference, but I am quite sure I will not be the last. Information technology has accounted for about 30 percent of this remarkable economic growth we've had, even though people directly working in IT only account for about 8 percent of our employment.

What we have tried to do in Government is to provide the conditions and give people

the tools to make the most of this phenomenal new era in human affairs. What you and people like you all across this country have done, have made the most of that—the balanced budget, the Telecommunications Act, doubling our investment in education and training, and dramatically increasing basic research, opening trade to new countries. And it's given us the longest economic expansion in history, the lowest African-American and Hispanic unemployment rates ever recorded, the lowest female unemployment rate recorded in 40 years, poverty down to a 20-year low, the lowest welfare rolls in 30 years, the lowest overall unemployment in 30 years. That is the good news.

And it was brought about primarily by this incredible environment and the gifted people who have made the most of this celebration of ideas and innovation and ingenuity. But as Mr. Rosen said when he introduced me, what I have been focused on now in the last year-plus of my term as President is the people and places who have been left behind in this phenomenal new economy, and I have for two reasons. One is, I think that all of us would like to see every American who is willing to work for it have a chance to be a part of this astonishing new era of enterprise. I think, just on pure ethical grounds, we all sense that the American values require that everybody be given a fair chance to participate. But secondly, I think it is in our economic interest to do it.

You know, we spend a lot of time in Washington discussing how in the world can we keep this economic expansion going? It's already the longest economic expansion in history, far longer than any other one that did not include a major war. How long can it go? What will happen? How will it come to an end? Will we really have inflation that will somehow bring an end to this long boom?

Well, it's clear to me that if we want it to continue, we have to do more to find new markets. New markets mean creating new businesses and new employees, as well as new customers. And if you do both, it means you can have growth without inflation. So this idea of closing the digital divide is good social policy. It's good personal ethics. But it's also very, very important for our continued economic expansion as a nation.

So I came here today to ask you to set another trend, to devote more time and technology, more ideas and energy, to closing the digital divide, the growing gap between those who have the tools and skills and motivation to succeed in the economy, which you've come here to explore and celebrate and push the frontiers of, and those who do not have those at this time.

Now, over the past year I have been to a lot of these places. I have been to the hills and hollows of Appalachia, to the heart of the Mississippi Delta. I've been to Englewood here in inner-city Chicago and to East Los Angeles. I've been to the Pine Ridge Reservation in South Dakota, the home of the Oglala Sioux. I have tried everywhere to shine the spotlight on the potential, not the problems, of these places.

Yesterday we began our third new markets tour in East Palo Alto, California, right in the heart of Silicon Valley, because I wanted the American people to know that, even there, there are a lot of our fellow citizens who are not yet fully participating in the information age.

Yesterday we also went to Shiprock, Navajo country, in the far north of New Mexico, and saw the vast differences, the literal vast distances, literal distances in this case that have to be overcome to build an information infrastructure that all of America is a part of. We visited a community living in the place where their forebears have been for more than a thousand years. We celebrated the Navajo Code Talkers, who were very instrumental in America winning World War II with our Allies in the Pacific because they developed a unique means of communication. They transferred messages back and forth in Navajo, and the language was so different from any code or any known language that our adversaries in World War II couldn't break it. And it's quite ironic that a people whose major contribution to the modern world was helping us to win World War II based on unique communications now live in a place where 70 percent of them don't even have telephones.

I was introduced by a young woman, a 13-year-old young girl who won a contest—really, a bright young woman—and she won this contest, and she won a computer. And she

found that she couldn't get on the Internet because she didn't have a telephone line in her home.

Next week we're going to rural North Carolina to discuss the prospects of broadband communications and what it might do to open opportunities in poor, rural, isolated places. And then in a couple of months we will have a part of this digital divide tour devoted solely to the potential that web accessibility offers to disabled Americans to participate more fully in the educational and economic life of the United States.

Now, this is all sobering at one level, but increasingly hopeful to me, because I honestly believe that the new information economy has the potential, at home and around the world, to lift more people out of poverty more quickly than at any previous period in all of human history; and that tapping that potential is actually in our enlightened self-interest.

And that's why I came here today, because I need your help and your support, because now we've come through all these years of this remarkable economic expansion. We have finally seen even income inequality begin to diminish over the last 2½ years, as more and more Americans at the lower end of the income scale begin to fully participate in the economy. We have a very important choice before us. And only with your help can America make the right choice to make sure that no one is left behind; to use these new technologies to widen the circle of opportunity rather than allowing the digital divide to widen the lines of division in education, race, income, and region. I will say again, it's not only morally the right choice. It's not just good social policy; it is imperative, in my judgment, if we're going to keep the economy growing, to find new places where we create not only new customers but new businesses and new employees.

Now, I believe we've got to find the right combination of incentives and initiative to bridge this divide. The distances that exist are, in some cases, as I said, they're physical. They're also educational, and they're clearly economic. But on every one of these new markets trips, we have met people who are eager for opportunity. And like the young

people here today who made this tour with me, they demonstrate that ability and drive and dreams are evenly distributed throughout the human race and throughout American society. It is opportunity which is still not evenly distributed.

Everywhere I have been, I find Americans who are not at all interested in charity but very interested in opportunity, not a handout but a hand up. We can only tap the potential of these new workers, these new business owners, these new learners, if we work together. Over and over again over the last 7 years, I have found, in some of our most important endeavors, the only thing that really works is the right kind of public-private partnership.

I'll just give you one example. We have the lowest welfare rolls in 30 years. The welfare rolls have been cut roughly in half since I became President. And part of it is the laws that have been passed, including the Welfare Reform Act of 1996, which required people who could work to work, but also invested more money in child care for their children and transportation so they could get to work, and kept their kids in food and medicine while they were making the transition.

But part of it was this remarkable partnership now that numbers over 12,000 businesses, people who committed that they would personally go out and find people, help them move from the welfare rolls, give them the training, give them the support they needed to succeed. And these people alone, just the 12,000 people in our partnership, have hired hundreds of thousands of people from the welfare rolls, many of whom were difficult to place but have succeeded. No Government mandate could have gotten that done. If we hadn't had the public-private partnership, it would not have worked nearly as well as it has.

The Vice President has worked for more than 7, or about 7 years now, in our partnership with the auto companies and the auto workers on the new generation vehicle, and we put a lot of money into it. But we couldn't develop a car in the Government. And yet you see—if you noticed in the last Detroit auto show, they're showing cars that they expect to market in the next year or 2, including larger cars that get 70 to 80 miles a gallon.

We have research going on now into the production of biofuels, not just from corn but from agricultural waste products, even from grasses. And if we ever get the conversion level down to about 1 gallon of gasoline for 8 gallons of fuel, biofuel, and then you get in a 70-mile-an-hour gas car, you'll be driving a car that gets over 500 miles a gallon in conventional terms. That will change the energy future of America and the world forever and will prove something I deeply believe, that we can conquer the challenge of global warming and continue to grow not only our economy but the developing economies of the world.

All of this has to be done in partnership. And that's basically what I propose for closing the digital divide and creating new markets throughout America. What we want to do is to be a catalyst, to provide investment incentives and the kind of framework and tools that will enable people in the private sector to do what is in their interest anyway.

We believe that tax incentives and loan guarantees can leverage private sector investment in distressed areas; get capital flowing to people in neighborhoods it might otherwise miss, having basically nothing to do necessarily with high technology investment.

Today, if you want to invest in a poor area of Latin America or Asia or Africa, we have a framework set up that could get you a combination of tax breaks and loan guarantees to lower the risk of doing that. Why? Because we think that we have an obligation as Americans to help poor people around the world develop stable lives. We know it promotes democracy; it promotes peace; it promotes environmental cleanup; it undermines the destabilizing forces at work in the world. All I'm trying to do, in terms of the law, is to give Americans who have money to invest the same incentives to invest in poor areas in America we give them today to invest in poor areas in Latin America or Africa or Asia. I think that's the right thing to do.

Last fall the Speaker of the House of Representatives, Dennis Hastert, and I came here to Chicago, met with Reverend Jackson and Congressman Bobby Rush and others, and we pledged to work together on a bipartisan initiative to spur investments in new markets. We are making real progress on our

end of the deal. The House of Representatives took a very important step last week toward creating the American Private Investment Companies that I've proposed to spur as much as \$1.5 billion in private investment in our hard-pressed communities. Now, I understand Speaker Hastert is going to be with you tomorrow, and I think you will see, if this is part of the discussion, that his commitment is genuine. This should not be a partisan issue.

Every American—Republican, Democrat, independent, green party member, whatever—every American has got a vested interest in seeing that every other American has the chance to live up to his or her God-given potential. So this is very, very important. And the main thing that we want to do with this portion of the new markets initiative is to make sure that we can get some investment in areas where people literally are isolated, where we need local, community-based investment, because you can't just say, well, we'll give them an education. They can hop on the subway or get in their car and drive to a job. But we also have to have a comprehensive approach that gives individuals the ability to bridge the digital divide, to create businesses which are far distant because technology permits them to overcome distances, and to get the education and training they need in the first place to succeed.

Now, what have we done in that? Well, when the Congress adopted the Telecommunications Act a few years ago, we insisted—the Vice President and I did—on something called the E-rate, the power of the Federal Communications Commission to set the E-rate. It is now worth over \$2 billion, and it gives discounts to schools, to libraries, public institutions, so they can afford to be a part of the Internet. And it's had a huge impact.

When I became President, only 3 percent of our classrooms, about 11 percent of our schools, were connected to the Internet. We've been working on this hard, now, for 6 years. Today, over two-thirds of our classrooms and 95 percent of our schools are connected, including 90 percent of very poor schools. And we'll be, by the end of the year, we'll probably be at 100 percent of the schools connected, except for those whose

physical facilities are literally in too much disrepair to have a connection.

I know that may be hard for some of you to believe, but it's true. We have cities where the average school building is 65 years of age or more. We have—there are schools in New York City that are still heated by coal-fired furnaces. But by and large, this E-rate has really worked.

We have a \$450 million technology literacy challenge, which is designed to make sure that we try to match contributions from others who put technology into our schools. Our budget offers \$2 billion in new tax incentives to help bridge the digital divide, to get the technology into the schools and into the rural communities, into community computing centers—and things like that can be available to adults as well as children.

We provide \$150 million to train new teachers to use technology in the classroom, so that they aren't repeatedly embarrassed by their students knowing more than they do, and so that they can actually make the most of it; and \$100 million to create more technology centers in 1,000 communities across the country.

Today I can tell you that 214 of these community technology centers will be created this year alone and 136 more will be expanded. These are very important because they are not only available to young people but also to adults who can use such centers after work and themselves acquire these skills. It's very, very important that we recognize that this cannot be solely the province of the school years. We have got to do more to bring adults who have been left on the other side of the digital divide into the economic mainstream. We are going to expand our investment in these centers by about \$86 million from State, local, private, and Federal sources together.

Not far from here, on Chicago's West Side is one of these centers. I mentioned the young people I met today from there, at Street-Level Youth Media. They spend a lot of their time there. They are here in this audience today. They can access the Internet and a lot more. They can have classes in website design, projects in video production, and, most important, the chance to apply their skills in real work for real wages. Every

child in America should have this opportunity, and we are trying to give it to every child in America.

If the budget passes, we will have 1,000 of these neighborhood networks next year. That is double the number we have now in the country. These computer learning centers are the fruit of public-private partnership under the leadership of the Department of Housing and Urban Development. They have already helped residents of some of our poorest neighborhoods move from welfare to work, increase their earnings, even start their own businesses.

One of the things that is totally unappreciated about the nature of the Internet revolution is the extent to which it gives people who are otherwise completely out of the economic mainstream, who could never have access to the kind of up-front capital it would take to start a traditional business and rent a big office space, the chance to actually earn money on the net. The first time I discovered this was when some of my friends at eBay told me that they now have 30,000 people making a living off eBay—not working for the company but making a living buying and selling and trading—and that the profiles indicated to them that a very substantial number of these people had previously been on welfare.

So again I will say, if you believe that there is an equal distribution of intelligence, ability, and dreams throughout the population, and if you have seen in your own lives what this has done for you and for this economy, it seems to me that closing the digital divide is one of the most important things we could do that would have the quickest results in alleviating the kind of poverty which is inexcusable in the kind of economy we're experiencing today.

Let me also say that—I made a joke about it earlier, but I think the idea of having teachers who are really able to make the most of technology in the classroom, and teach their students, is something that's very important. Everybody I have ever worked with on this in the last several years—all the heads of all the companies that have tried to really help our schools continue to hammer this.

I got a letter from the deans of more than 200 colleges and universities, pledging to join

in that effort, holding themselves responsible for results, being willing to test their progress with a tool designed by the CEO Forum on Education and Technology, a forum that includes a lot of the companies that are represented in this auditorium today. But this is a big deal. This is a serious commitment that we haven't had in the past. And I want to thank the Forum on Education and Technology and these 200 deans for what they want to do to train our teachers.

But this is just the start. So here is what I came to do really. I want to ask you to do the following things. First of all, if you are not already a part of it, I hope that the companies, everyone represented here from the largest to the smallest, would support our national call to action, which I issued 2 weeks ago. Its basic goals are to provide 21st century learning tools for every child in every school and to create digital opportunity for every family and every community.

I have asked for businesses and schools and community groups and volunteers to enlist in the effort. More than 400 organizations have signed on in the first 2 weeks, and they are already doing amazing things. Many of you have been working at this for some years now, to help in education and in economic development. But if you are not part of this, I hope you will become part of this. I hope you will do more than sign a pledge. I hope you will commit to fulfill it.

I want you all to ask if there is anything you are not doing that you could do to give our schools computers and high-speed connections, to design the educational software our children need to succeed, to make sure our teachers are as comfortable in front of a computer as in front of a chalkboard. Again I say, many companies are leading this effort today, but we need more. The biggest problem in American education and the biggest problem in combating poverty and creating economic opportunity is not that there are no good ideas. Every problem in American education today has been solved by somebody somewhere.

I remember when I started running for President and I was coming to Chicago, there was a woman here from my home State of Arkansas who was principal of a junior high school that was in a neighborhood with the

highest murder rate in the State of Illinois. And you had to ask to get into this junior high school. They had 150 mothers and 75 fathers in that school every week. They had a strict no-weapons policy; if you had one, you were history. They had a zero dropout rate. The kids went on to high school and did well, and a phenomenal percentage of them went on to college. And I could give you lots of examples like that.

The problem we have—and in terms of closing the digital divide and education and economics, there are examples everywhere. The problem we have in America with social change is getting things to scale, is reaching a critical mass of people. That's why I came here today. This is a critical mass of the IT community. And you need to reach a critical mass of the at-risk kids and the communities where economic and educational opportunities are needed to close the digital divide.

The second thing I want to ask you to do, so that today's students can become tomorrow's success stories, is to expand internships and to deepen your talent pool. I just received a survey that I read just the day before yesterday indicating that, even making allowances for differences in education, women and minorities are still comparatively underrepresented in most IT occupations. We can do a lot to close the digital divide just by equalizing the representation once people do have the education and skills they need.

The third thing I would like to ask you to do is to recognize, as I said before, there is a limit to what the Federal Government can do. I intend to set up a framework and to try to provide the necessary tools and to generate as much activity as I can. But we need more partnerships at the local level with the schools, with the local communities, with the local community groups, and with local government. I think you will find that if you are not involved in this kind of work, there is more interest in it than ever before, and people are eager for help.

If we work together, we can empower people with the tools and the training they need to lift themselves out of poverty. If we work together, we can give people the ability to use new technology to start new businesses. If we work together, we can close the digital divide and open digital opportunities.

I am asking you to do this because you can. I am asking you to do this because it's right. And I am asking you to do this because America needs it to have a continually growing economy.

The productivity increases generated by information technology in the IT companies themselves, and then through application throughout the economy, is what has enabled us to continue to grow at 4 percent and to keep inflation down. I am doing my best to open new markets around the world and to keep our markets open, which helps to keep inflation down and to grow. But the best opportunity we have are all those people out there that are dying to be part of what the rest of us may take for granted.

And I can tell you, I have lived longer than most people who do very well in the work that you do. Our country has never had an economy like this. The last time we had anything close was in the 1960's. It came apart over the competing claims and crises in civil rights and the war in Vietnam and the attempt to finance all that and deal with the problems of the poor. I see a lot of people who are gray-headed like me out there nodding their heads.

And when it happened, when I grew up in it, I thought that economy would last forever. I just took it for granted that we were the most productive economy in the world; we were going to win the cold war; we'd solve the civil rights problems in the courts and the Congress, and everything would be hunky-dory. And then boom, one day it was gone.

And I've waited 35 years, as a citizen, for our country to have the chance to give all our people the future of our dreams for our children. That's the chance we've got now. And I know you're very busy. I know you have a lot of other things to do, but I don't know how many years we'll ever have to wait again until a moment like this comes along.

I can't do it alone. The Federal Government can't do it alone. But if we all do it together, there is nothing we can't do. We will never, ever, ever have a better chance, and, therefore, a more profound responsibility, to close the digital divide.

Thank you very much.

NOTE: The President spoke at 2:10 p.m. in the Arie Crown Theater at the McCormick Place Convention Center. In his remarks, he referred to Frederic D. Rosen, chairman, Key3Media Group, Inc., who introduced the President; Jason Chudnofsky, president, SOFTBANK COMDEX, Inc.; Tony Streit, administrative director, Street-Level Youth Media; Rev. Jesse Jackson, civil rights activist; and Myra Jodie, student, Steamboat Navajo Nation, AZ.

Statement on the Benefits of the Community Reinvestment Act

April 19, 2000

Ensuring that all Americans have an opportunity to share in our Nation's economic prosperity has been at the core of my administration's domestic agenda. We have made progress, but there is much more that we can do to extend the benefits of the vibrant American economy, including our innovative financial markets, to all Americans.

The Community Reinvestment Act (CRA) is central to that goal. Early in my administration, I asked the Federal banking regulators to revise the regulations implementing CRA to focus on the performance of banks and thrifts in serving the credit needs of their local communities. Since 1993, banks and thrifts have pledged to make over \$1 trillion in home mortgage, small business, and community development loans for low and moderate income neighborhoods and borrowers. This report documents that since 1993 banks and thrifts have already made well over \$600 billion of such types of loans. Today, credit is more widely available than ever before for Americans who wish to borrow to buy a house or start a business. Our success in democratizing access to credit under this administration is an historic achievement, but we cannot rest.

The financial modernization legislation that I signed into law last fall allows the integration of banking, insurance, and securities industries. In itself, this modernization should benefit consumers due to enhanced competition and innovative products and services. However, we also took a strong stand on protecting CRA, and we insisted on retaining CRA as a key pillar in the new banking system. We would not agree with

those who attempted to weaken the CRA obligations of banks and thrifts in this process. Our determination resulted in the new requirement that a bank or thrift must have at least a satisfactory CRA rating each and every time it expands into these newly authorized lines of business. This is the first time CRA will be taken into consideration outside traditional bank merger and branch opening activities.

We must remain watchful to ensure that, as we modernize our financial system, it works for all Americans. The Treasury Department's baseline report on CRA will serve as a useful guidepost in assessing how far we have come and what remains to be done. The report will also provide a benchmark against which to assess changes in access to credit and financial services as the industry continues to evolve in the years ahead.

Memorandum on International Education Policy

April 19, 2000

Memorandum for the Heads of Executive Departments and Agencies

Subject: International Education Policy

To continue to compete successfully in the global economy and to maintain our role as a world leader, the United States needs to ensure that its citizens develop a broad understanding of the world, proficiency in other languages, and knowledge of other cultures. America's leadership also depends on building ties with those who will guide the political, cultural, and economic development of their countries in the future. A coherent and coordinated international education strategy will help us meet the twin challenges of preparing our citizens for a global environment while continuing to attract and educate future leaders from abroad.

Since World War II, the Federal Government, in partnership with institutions of higher education and other educational organizations, has sponsored programs to help Americans gain the international experience and skills they will need to meet the challenges of an increasingly interdependent world. During this same period, our colleges and universities have developed an educational

system whose reputation attracts students from all over the world. But our work is not done. Today, the defense of U.S. interests, the effective management of global issues, and even an understanding of our Nation's diversity require ever-greater contact with, and understanding of, people and cultures beyond our borders.

We are fortunate to count among our staunchest friends abroad those who have experienced our country and our values through in-depth exposure as students and scholars. The nearly 500,000 international students now studying in the United States at the postsecondary level not only contribute some \$9 billion annually to our economy, but also enrich our communities with their cultures, while developing a lifelong appreciation for ours. The goodwill these students bear for our country will in the future constitute one of our greatest foreign policy assets.

It is the policy of the Federal Government to support international education. We are committed to:

- encouraging students from other countries to study in the United States;
- promoting study abroad by U.S. students;
- supporting the exchange of teachers, scholars, and citizens at all levels of society;
- enhancing programs at U.S. institutions that build international partnerships and expertise;
- expanding high-quality foreign language learning and in-depth knowledge of other cultures by Americans;
- preparing and supporting teachers in their efforts to interpret other countries and cultures for their students; and
- advancing new technologies that aid the spread of knowledge throughout the world.

The Federal Government cannot accomplish these goals alone. Educational institutions, State and local governments, non-governmental organizations, and the business community all must contribute to this effort. Together, we must increase and broaden our commitment. Therefore, I direct the heads

of executive departments and agencies, working in partnership with the private sector, to take the following actions:

1) The Secretaries of State and Education shall support the efforts of schools and colleges to improve access to high-quality international educational experiences by increasing the number and diversity of students who study and intern abroad, encouraging students and institutions to choose nontraditional study-abroad locations, and helping under-represented U.S. institutions offer and promote study-abroad opportunities for their students.

2) The Secretaries of State and Education, in partnership with other governmental and nongovernmental organizations, shall identify steps to attract qualified post-secondary students from overseas to the United States, including improving the availability of accurate information overseas about U.S. educational opportunities.

3) The heads of agencies, including the Secretaries of State and Education, and others as appropriate, shall review the effect of U.S. Government actions on the international flow of students and scholars as well as on citizen and professional exchanges, and take steps to address unnecessary obstacles, including those involving visa and tax regulations, procedures, and policies.

4) The Secretaries of State and Education shall support the efforts of State and local governments and educational institutions to promote international awareness and skills in the classroom and on campuses. Such efforts include strengthening foreign language learning at all levels, including efforts to achieve bi-literacy, helping teachers acquire the skills needed to understand and interpret other countries and cultures for their students, increasing opportunities for the exchange of faculty, administrators, and students, and assisting educational institutions in other countries to strengthen their teaching of English.

5) The Secretaries of State and Education and the heads of other agencies shall take steps to ensure that international educational exchange programs, including the Fulbright program, are coordinated through the Inter-agency Working Group on United States Government-Sponsored International Ex-

change and Training, to maximize existing resources in a nonduplicative way, and to ensure that the exchange programs receive the support they need to fulfill their mission of increased mutual understanding.

6) The Secretary of Education, in cooperation with other agencies, shall continue to support efforts to improve U.S. education by developing comparative information, including benchmarks, on educational performance and practices. The Secretary of Education shall also share U.S. educational expertise with other countries.

7) The Secretaries of State and Education shall strengthen and expand models of international exchange that build lasting cross-national partnerships among educational institutions with common interests and complementary objectives.

8) The Secretary of Education and the heads of other agencies, in partnership with State governments, academic institutions, and the business community, shall strengthen programs that build international expertise in U.S. institutions, with the goal of making international education an integral component of U.S. undergraduate education and, through graduate and professional training and research, enhancing the Nation's capacity to produce the international and foreign-language expertise necessary for U.S. global leadership and security.

9) The Secretaries of State and Education, in cooperation with other agencies, the academic community, and the private sector, shall promote wise use of technology internationally, examining the implications of borderless education. The heads of agencies shall take steps to ensure that the opportunities for using technology to expand international education do not result in a widening of the digital divide.

10) The Secretaries of State and Education, in conjunction with other agencies, shall ensure that actions taken in response to this memorandum are fully integrated into the Government Performance and Results Act (GPRA) framework by means of specific goals, milestones, and measurable results, which shall be included in all GPRA reporting activities, including strategic plans, performance plans, and program performance reports.

Items 1–10 of this memorandum shall be conducted subject to the availability of appropriations, consistent with the agencies' priorities and my budget, and to the extent permitted by law.

The Vice President shall coordinate the U.S. Government's international education strategy. Further, I direct that the heads of agencies report to the Vice President and to me on their progress in carrying out the terms of this memorandum.

This memorandum is a statement of general policy and does not confer a private right of action on any individual or group.

William J. Clinton

**Letter to Congressional Leaders
Transmitting a Report on Prevention
of Nuclear Proliferation**

April 19, 2000

Dear Mr. Speaker: (Dear Mr. President:)

As required under section 601(a) of the Nuclear Non-Proliferation Act of 1978, as amended (Public Law 95–242, 22 U.S.C. 3281(a)), I am transmitting a report on the United States Government's efforts to prevent nuclear proliferation. The report covers activities between January 1, 1998, and December 31, 1998.

Sincerely,

William J. Clinton

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Albert Gore, Jr., President of the Senate.

**Remarks at the Oklahoma City
National Memorial Dedication
Ceremony in Oklahoma City,
Oklahoma**

April 19, 2000

Thank you very much, Governor Keating. I wanted to be here today, and I was grateful to be asked. I wanted to thank you and Cathy for all you have done. Thank you, Senator Nickels and members of the congressional delegation. Thank you, Mayor Humphreys, and I thank your predecessor, Mayor Norick.

Thank you, Chairman Johnson; thank you, Karen Luke.

I thank all of the Federal leaders who are here today who lost their employees and worked so hard, Attorney General Reno and our Secretaries of Health and Human Services, Housing and Urban Development, and Transportation, the leaders of the Office of Personnel Management, the Customs, the ATF, and the Secret Service and many others. I thank Bob Stanton and the Park Service for making sure this place would be well cared for, forever.

I thank that unknown number of people who contributed to the building of this magnificent monument and to the scholarship fund. I thank General Ferrell and all those who are working and will work here from now on to combat terrorism. I congratulate the young couple who designed this magnificent memorial, and I think we should give them a round of applause. [*Applause*]

I thank the Oklahoma City Philharmonic Brass and the Memorial Community Choir and Shawntel Smith for their ringing in wonderful music today.

Most of all, I thank the families who lost your loved ones; the survivors and your families, the rescue workers, and the family of Oklahoma for setting an example for America. I can add little now to the words and music, even more to the silence and amazing grace of this memorial. Its empty chairs recall the Mercy Seat of Old Testament Scripture—a place for the children of God to come for renewal and dedication.

So this is a day both for remembrance and for renewal. Hillary and I will never forget being with you at that first memorial service while the rescue teams were still searching. I know the last 5 years have not been easy. I hope you can take some comfort in knowing that, just as I said 5 years ago, America is still with you, and that with this memorial you can know America will never forget.

As the Governor said in alluding to Gettysburg, there are places in our national landscape so scarred by freedom's sacrifice that they shape forever the soul of America—Valley Forge, Gettysburg, Selma. This place is such sacred ground.

I think you should all know that it was on this exact day 225 years ago that the American Revolution began. What a 225 years it has been. The brave Americans we lost here 220 years later were not fighting a war, but they were patriots in service to their fellow citizens, just as much as the police and fire and other public servants are here among us today. And they were children whose promise keeps our old democracy forever young.

Five years ago the cowards who killed them made a choice, a choice to attack this building and the people in it, because they wanted to strike a blow at America's heartland, at the core of our Nation's being. This was an attack on all America and every American.

Five years later we are here because you made a choice, a choice to choose hope and love over despair and hatred. It is easy for us to say today, and even perhaps easy for you to clap today, but I know that this wise choice was also a very hard one, especially for the families of the victims. I know there are still days when the old anger wells up inside you; still days when tears fill your eyes, when you think your heart will surely break. On those days in the future, I hope you can come here and find solace in the memory of your loved ones, in the honor of your fellow citizens.

I hope you can find the strength to live a full and loving life, free of hatred, which only cripples. I believe your loved ones would want you to have that life. And though you have given too much, you still have so much to give.

The great writer Ralph Ellison who was a native of this city, once said, "America is woven of many strands . . . our fate is to become one, and yet many." On April 19th, 1995, our many strands became one, one in love and support for you and in our determined opposition to terrorism. You taught us again how much stronger we are when we all stand together in our common humanity to protect life, liberty, and the rule of law for all.

We may never have all the answers for what happened here. But as we continue our journey toward understanding, one truth is clear: What was meant to break has made you stronger.

As I left the White House today, I looked, as I often do, at your tree, the beautiful dogwood Hillary and I planted on the South Lawn 5 years ago for those who were lost here. Five years later that tree stands a little taller; its spring flowers are a little fuller; its roots have dug in a little deeper. But it's still a young tree.

Five years isn't a very long time for trees to grow or for wounds to heal and hearts to mend. But today, like your beautiful dogwood tree on the White House lawn, Oklahoma City clearly is blooming again. For that, all your fellow Americans and, indeed, decent, good people all over the world are grateful to you and grateful to God for the grace that led you on.

In Romans it is said, "The night is far spent; the day is at hand. Let us cast off the works of darkness, and let us put on the armor of light."

May you keep on your armor of light. May you keep your light shining on this place of hope where memories of the lost and the meaning of America will live forever.

May God bless you, and God bless America.

NOTE: The President spoke at 6:05 p.m. on the memorial grounds. In his remarks, he referred to Gov. Frank Keating of Oklahoma and his wife, Cathy; Mayor Kirk Humphreys and former Mayor Ronald Norick of Oklahoma City; Robert M. Johnson and Karen Luke, cochairs, Oklahoma City National Memorial Foundation; Gen. Donald F. Ferrell, USAF (Ret.), chairman, board of directors, Oklahoma City National Memorial Institute for the Prevention of Terrorism and Violence; memorial designers Hans-Ekkehard, Torrey Butzer, and Sven Berg, Butzer Design Partnership; and Shawntel Smith, Miss America 1996, who sang the national anthem.

Memorandum on the Report to the Congress Regarding Conditions in Burma and U.S. Policy Toward Burma

April 19, 2000

Memorandum for the Secretary of State

Subject: Report to the Congress Regarding Conditions in Burma and U.S. Policy Toward Burma

Pursuant to the requirements set forth under the heading "Policy Toward Burma" in section 570(d) of the FY 1997 Foreign Operations Appropriations Act, as contained in the Omnibus Consolidated Appropriations Act (Public Law 104-208), a report is required every 6 months following enactment concerning:

- 1) progress toward democratization in Burma;
- 2) progress on improving the quality of life of the Burmese people, including progress on market reforms, living standards, labor standards, use of forced labor in the tourism industry, and environmental quality; and
- 3) progress made in developing a comprehensive, multilateral strategy to bring democracy to and improve human rights practices and the quality of life in Burma, including the development of a dialogue between the State Peace and Development Council (SPDC) and democratic opposition groups in Burma.

You are hereby authorized and directed to transmit the report fulfilling these requirements to the appropriate committees of the Congress and to arrange for publication of this memorandum in the *Federal Register*.

William J. Clinton

NOTE: This memorandum was released by the Office of the Press Secretary on April 20.

Letter to Congressional Leaders Transmitting a Report on Efforts To Achieve Sustainable Peace in Bosnia and Herzegovina

April 19, 2000

Dear Mr. Speaker: (Dear Mr. President:)

As required by section 7 of the 1998 Supplemental Appropriations and Rescissions Act (Public Law 105-174) (the Levin Amendment), and section 1203 of the Strom Thurmond National Defense Authorization Act for FY 1999 (Public Law 105-261), I transmit herewith a report on progress made toward achieving benchmarks for a sustainable peace process.

In July 1999, I sent the second semiannual report to the Congress under Public Law 105-174, detailing progress towards achieving the 10 benchmarks adopted by the Peace Implementation Council (PIC) and the North Atlantic Council (NAC) for evaluating implementation of the Dayton Peace Accords. This report provides an updated assessment of progress on the benchmarks covering the period from July 1 through December 31, 1999.

In addition to the semiannual reporting requirement of Public Law 105-174, this report fulfills the requirements of section 1203 in connection with my Administration's request for funds for FY 2001.

Sincerely,

William J. Clinton

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Albert Gore, Jr., President of the Senate. This letter was released by the Office of the Press Secretary on April 20.

Remarks Prior to Discussions With Chairman Yasser Arafat of the Palestinian Authority and an Exchange With Reporters

April 20, 2000

The President. Hello, everyone. Let me just briefly say that I am very, very glad to have Chairman Arafat back here at the White House. And I'm looking forward to our talks. We've reached a very serious time in the

peace process. He and Prime Minister Barak have set for themselves an ambitious timetable to reach a framework agreement as soon as they can, and then a final agreement by the middle of September. So we're working hard on it, and I think we'll get some things done today.

Elían Gonzalez

Q. Mr. President, a short time ago, Juan Miguel Gonzalez came out and called on the American people to help him urge you and your Attorney General to reunite him with his son. Do you have a message for Juan Miguel Gonzalez? And also, what steps is your administration prepared to take if the boy's Miami relatives won't turn him—

The President. First of all, I think he should be reunited with his son. That is the law. And the main argument of the family in Miami for not doing so has now been removed. I mean, their main argument was, if we let him go back to his father before the court rules, he might go back to Cuba. The court has now said he shouldn't go back to Cuba. The Justice Department agrees with that, and he has agreed to that.

So there is now no conceivable argument for his not being able to be reunited with his son. And that is what the lawful process has said. The immigration law is clear, and the determination of the INS and a Federal court are clear. So I think he should be united in as prompt and orderly way as possible.

Q. Well, what about the appeals court suggestion that a 6-year-old maybe has some rights to say where he wants to live and apply for asylum on his own behalf?

The President. Well, even if the appeals court were to say that, which would be a rather dramatic departure from the law, then there would have to be some setup at a trial level for determining that. And in the meanwhile, while all this legal process plays out, as a matter of law the INS determined, and a Federal court affirmed, that the father should have custody.

So, clearly, he should be reunited. And the argument that he might go back to Cuba before this thing can be finally resolved in the courts is no longer there. That's not an argument anymore.

Israeli Nuclear Arsenal and Middle East Peace Process

Q. Mr. President, did you write a letter for former Prime Minister Netanyahu, promising him that Israel would keep its nuclear or mass destruction weapons in case they reach an agreement with the Palestinians?

The President. I don't believe that issue ever came up in connection with an agreement with the Palestinians, with Mr. Netanyahu, or any other Israeli Prime Minister. To the best of my memory, it did not.

I think you all know what the issues are between the Israelis and the Palestinians. They are difficult, but I think they can be bridged. If the parties want to do this, we will do everything we can to help them and to minimize the difficulties and the risks involved. There are risks and difficulties involved for Chairman Arafat; there are risks and difficulties involved for Prime Minister Barak, for the Palestinian people, and for the Israeli people. I believe they are not nearly as great as the risks and difficulties of not making a peace agreement, so I hope they will do it. And if they want to do it, I'll do whatever I can to help them.

NOTE: The President spoke at 5:54 p.m. in the Rose Garden at the White House. In his remarks, he referred to Prime Minister Ehud Barak and former Prime Minister Binyamin Netanyahu of Israel. A tape was not available for verification of the content of these remarks.

Statement on the National Economy
April 20, 2000

When I came into office, the budget deficit was a record \$290 billion, confidence in the economy was shaky, and unemployment was too high. Seven years of fiscal discipline have turned that situation around, creating an era of record budget surpluses.

Today we received more good news that our economic strategy is working and that the budget surplus is growing. The Treasury Department released Government financial information showing that the comparable budget balance for the first half of this fiscal year improved by more than \$30 billion from the first half of last year. This keeps us on

track to pay down a record \$300 billion of debt over 3 years.

In addition, today, for the third time this year, the Treasury Department is buying back some of our debt. If we maintain our fiscal discipline, we can make America debt-free by 2013 for the first time since Andrew Jackson was President. This will keep interest rates lower, helping to maintain strong investment and growth while saving money for American families.

Message to the Littleton, Colorado, Community

April 20, 2000

It is written in Scripture: “Blessed are they that mourn, for they shall be comforted.” Hillary and I are with you in the spirit of comfort and prayer as you gather to remember those who lost their lives one year ago today.

You do not mourn alone. What happened in Littleton pierced the soul of America. Though a year has passed, time has not dimmed our memory or softened our grief at the loss of so many, whose lives were cut off in the promise of youth. It has not caused us to forget their gallant teacher—a man whose character and values brought so much strength to the school, sports teams, and community he served.

Last year, in the midst of the heartbreak and devastation of the Columbine tragedy, we saw the American spirit at its best—in the spontaneous outpouring of support for the Littleton community and in the determination to prevent such tragedies in the future. Our hearts have not yet fully healed, but today America stands together as one to keep faith with all those who lost their lives at Columbine—and all those whose lives were forever changed that day. We must continue to honor their memory and your courage by resolving to make America a safer place for all our children.

Hillary and I continue to keep all of you in our thoughts and prayers.

Bill Clinton

Videotape Remarks to a National Campaign Against Youth Violence Townhall Meeting

April 21, 2000

Good evening. I’m so pleased to join you as the National Campaign Against Youth Violence kicks off its City-By-City initiative.

Seven years ago I had the honor to speak at the Church of God in Christ in Memphis. That morning I spoke about the awful toll of youth violence and gun crime in our communities. On that day I said, unless we deal with the ravages of crime and violence, none of the other things we seek to do will ever take us where we need to go.

Together, we have come a long way in the last 7 years. With our strategy of putting more cops on the beat and getting more guns off the street, overall crime has fallen for the seventh year in a row. The juvenile violent crime arrest rate is the lowest in 10 years. And with 100,000 new community police officers and the Brady law, we’ve kept guns out of the hands of a half-million felons, fugitives, and stalkers.

But while we’ve made great progress, one act of violence is still one too many. Nearly a year has passed since the awful tragedy at Columbine, and gunfire continues to take the lives of nearly a dozen young people every single day.

If we’re going to reach our goal of making America the safest big country on Earth, all of us have a responsibility to act. And Congress has to do its part, too, by sending me commonsense gun legislation that mandates child safety locks, closes the gun show loophole, bans the importation of large ammunition clips, and holds adults accountable when they allow young people to get their hands on deadly guns.

Our administration is trying to do its part by strengthening the enforcement of our gun laws, supporting more after-school programs, more mentoring, and more conflict resolution and peer mediation. Last year we helped to launch the National Campaign Against Youth Violence, and we established a new White House Youth Violence Council to coordinate the wide-ranging efforts of the Federal Government.

We're also working hard to ensure that all Americans are treated with dignity and that no American is victimized by violence because of his or her race, gender, religion, or sexual orientation. That's why we've fought so hard to pass a strong hate crimes law, to promote diversity, to end discrimination in the work force. We must all recommit ourselves to respecting one another, to seeing our diversity as our greatest strength, and to recognizing the fundamental values that define us as one America.

Ultimately, this effort begins on the ground, at the grassroots. You can reach out to troubled youth. You can help to change a culture that too often glorifies violence and hate. You can talk to your children, teach them to resolve their conflicts peacefully, and raise them with the right values. I'm grateful, because in Memphis, you're doing these things. And there's no mission more important for our Nation.

Your work in Memphis, and the work of the Memphis Shelby Crime Commission, is a testament to the fundamental goodness of the American spirit. It sets an example I hope cities all across our land will follow.

Thank you, and God bless you.

NOTE: The remarks were videotaped at approximately 7:40 p.m. in the Map Room at the White House on March 28 for broadcast to the meeting in Memphis, TN, on April 14. The transcript was released by the Office of the Press Secretary on April 21. A tape was not available for verification of the content of these remarks.

**Statement on Russian State Duma
Action on the Comprehensive
Nuclear-Test-Ban Treaty**
April 21, 2000

I am pleased that the Russian State Duma today approved the Comprehensive Nuclear-Test-Ban Treaty (CTBT). I look forward to prompt action on the CTBT by the Federation Council, which also approved the START II Treaty earlier this week.

More than 150 countries have signed the CTBT so far, agreeing to stop all nuclear explosive testing. Ratification of the CTBT by Russia would mean that 30 of the 44 states whose ratification is required for entry into force have now approved this historic agree-

ment, including many U.S. friends and allies. Approval of the CTBT by Russia—as well as the recent approvals by Chile, Bangladesh, and Turkey—renews momentum for the international effort to halt the spread of nuclear weapons and promote disarmament around the world.

I congratulate President-elect Putin and his government, members of the State Duma, and Russian citizens who together worked to achieve this important step toward a safer future.

**Memorandum on Waiver and
Certification of Statutory Provisions
Regarding the Palestine Liberation
Organization**
April 21, 2000

Presidential Determination No. 2000-19

Memorandum for the Secretary of State

Subject: Waiver and Certification of Statutory Provisions Regarding the Palestine Liberation Organization

Pursuant to the authority vested in me under section 538(d) of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 2000, as contained in the Consolidated Appropriations Act for Fiscal Year 2000 (Public Law 106-113), I hereby determine and certify that it is important to the national security interests of the United States to waive the provisions of section 1003 of the Anti-Terrorism Act of 1987, Public Law 100-204.

This waiver shall be effective for a period of 6 months from the date of this memorandum. You are hereby authorized and directed to transmit this determination to the Congress and to publish it in the *Federal Register*.

William J. Clinton

**Message on the Observance of
Easter, 2000**
April 21, 2000

Warm greetings to everyone celebrating Easter.

In this holy season, Christians across America and around the world relive the

events of Jesus' life, death, and Resurrection, rejoice in His fulfillment of the promise of salvation, and give prayerful thanks for the assurance of God's forgiving love.

As Christians, we have been called to share that forgiveness with others. Across the globe, in places large and small, we have witnessed the tragic consequences of humanity's refusal to forgive. Ancient feuds, ethnic tensions, old hatreds and prejudices—these have torn apart families, communities, and nations for decades and continue to bring suffering to our world. On this, the first Easter of the new millennium and in the Jubilee Year of Christ's birth, the challenge to each of us is to reflect God's love and forgiveness in all our actions.

Let us strive to see beyond the surface differences that may divide us from one another by discovering the values we share. Let us work together to lift the yoke of poverty and oppression that crushes so many lives around the world. Let us recognize that, in Jesus' Resurrection, we see both the promise and the proof of love's capacity to triumph over the forces of misunderstanding, fear, and hatred.

As millions of Americans gather with loved ones to share the joy of this blessed holiday, Hillary and I extend our best wishes to all for a wonderful Easter celebration.

Bill Clinton

**Letter to the Chairman of the House
Judiciary Committee on Proposed
Gun Safety Legislation**

April 21, 2000

Dear Chairman Hyde:

As you know, yesterday marked the anniversary of the tragic shootings at Columbine High School—and the date by which I had called on Congress to enact commonsense gun safety legislation. The passing of this deadline is a deep disappointment. When nearly 12 of our nation's children are killed by gunfire every day, we have an urgent responsibility to do all we can to reduce gun violence. That is why I am grateful for your good-faith efforts to seek agreement, despite tremendous pressure on Congress from the gun lobby. I was also glad to see that you

joined Representative Conyers last week in urging Chairman Hatch to promptly convene the juvenile justice conference and to move forward at last on this legislation. And I appreciated receiving your most recent proposal to reach a compromise.

I still have serious concerns about aspects of your latest proposal that I fear would create new loopholes for criminals to buy guns. But I am confident that if we can keep working together in good faith, we can reach agreement on a strong, commonsense bill that I can sign into law.

I was especially encouraged by your recent commitment on "Meet the Press" and in your letter to Mr. Conyers to ensure that persons under felony indictments remain subject to full, three-day background checks. It is critical that we make the same effort to stop criminals from buying guns at gun shows that we already make at gun stores.

In order to prevent fraud, protect privacy, and fully enforce the nation's gun laws—goals we both share—I believe we must make National Instant Criminal Background Check System records available for a sufficient period of time rather than immediately destroying them. However, as a gesture of good faith, I am willing to meet you halfway on this important issue, by requiring records to be destroyed within 90 days, instead of 180 days as provided under current law. With this compromise, we can address your concerns while preserving this significant law enforcement tool. I hope this step will help break the current logjam, and bring your colleagues back to the conference table.

We still have other important issues to resolve. I remain concerned about aspects of your proposal that would: leave open the gun show loophole by letting criminals buy guns at flea markets and by cutting short existing background checks on persons with certain mental health histories and domestic violence restraining orders; undermine the ban on importation of high-capacity ammunition clips; weaken long-standing controls on interstate firearms sales; and fail to require vital record-keeping provisions needed by law enforcement to trace guns sold at gun shows that later turn up in crimes.

Despite these significant outstanding issues, I believe we can reach an agreement.

It is my sincere hope that in the coming weeks, we can work together to address our common goal of closing the gun show loophole and ensuring that our nation's gun laws are fully enforced without weakening current gun laws in the process. Neither of us is interested in a compromise that would serve only to jeopardize public safety and the effectiveness of law enforcement. I look forward to working with you to pass this common-sense legislation, and I encourage you to continue urging Chairman Hatch to allow the conferees to meet and consider this legislation. As you have stated, our efforts will come to nothing until that happens. Only by allowing an open and honest debate in conference and by working out our differences can we do right by the American people on this vital issue. We owe it to the families of Littleton, and the thousands more who lose their lives in gunfire each year in America, to get this done now.

Sincerely,

Bill Clinton

Digest of Other White House Announcements

The following list includes the President's public schedule and other items of general interest announced by the Office of the Press Secretary and not included elsewhere in this issue.

April 14*

The President announced his intention to nominate Mark D. Gearan to be a member of the Board of Directors of the Corporation for National and Community Service.

April 15

In the afternoon, the President traveled from Palo Alto, CA, to Bakersfield, CA, where he had a telephone conversation with President-elect Vladimir Putin of Russia.

*This release was not received in time for publication in the appropriate issue.

In the evening, the President traveled to Beverly Hills, CA, and later he returned to Palo Alto, CA.

April 17

In the afternoon, the President traveled to Shiprock, NM, and in the evening, he traveled to Albuquerque, NM.

The White House announced that the President will visit Portugal on May 30–June 1, Germany on June 1–3, Russia on June 4–5, and Ukraine on June 6.

April 18

In the morning, the President traveled to Chicago, IL, and in the evening, he returned to Washington, DC.

April 19

In the morning, the President had a telephone conversation with Prime Minister Tony Blair of the United Kingdom from the Oval Office.

In the afternoon, the President traveled to Oklahoma City, OK, and in the evening, he returned to Washington, DC.

April 21

In the afternoon, the President was interviewed at the White House by representatives of the Department of Justice Campaign Finance Task Force.

Nominations Submitted to the Senate

NOTE: No nominations were submitted to the Senate during the period covered by this issue.

Checklist of White House Press Releases

The following list contains releases of the Office of the Press Secretary that are neither printed as items nor covered by entries in the Digest of Other White House Announcements.

Released April 15

Transcript of a press briefing by Acting Chair of the White House Council on Environmental Quality George Frampton on the President's visit to Sequoia National Park*

Released April 17

Statement by the Press Secretary on the President's upcoming travel to Portugal, Germany, Russia, and Ukraine

Transcript of a press briefing by National Economic Council Director Gene Sperling and Special Assistant to the President for Technology Matters Tom Kalil on the digital divide

Released April 20

Transcript of a press briefing by Press Secretary Joe Lockhart

* This release was made available by the Office of the Press Secretary on April 14 but was embargoed for release until 7 a.m. on April 15.

Transcript of a senior staff briefing

Released April 21

Transcript of a press briefing by Press Secretary Joe Lockhart

Statement by the Press Secretary on the President and Vice President's separate interviews with representatives of the Department of Justice Campaign Finance Task Force

Acts Approved by the President

NOTE: No acts approved by the President were received by the Office of the Federal Register during the period covered by this issue.
